Upgrade an old Jetpack system to the Yahboom SUPER factory system

Upgrade an old Jetpack system to the Yahboom SUPER factory system
1. Description
2. Upgrade method
    2.1. Flash the SUPER bootloader
    2.2. Restore the factory image system
    2.3. SSD expansion

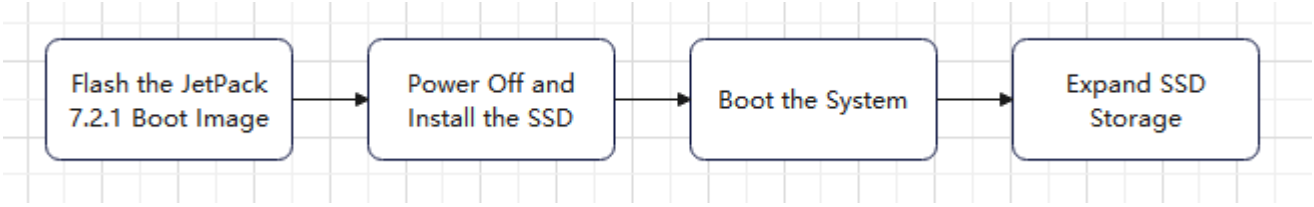
1. Description

This tutorial is mainly provided for the following customers

1. Users who purchased the Jetson Orin official kit / Jetson Orin SUB kit before October 2026

Note:

Users who purchased Jetson Orin after October 2026 should follow the method below



2. Upgrade method

2.1. Flash the SUPER bootloader

Refer to the [Chapter 2 Mainboard basics: 07. Flash the SUPER bootloader (Must read)] tutorial: completing it allows the mainboard to boot the Jetpack7.2.1 system.

2.2. Restore the factory image system

Refer to the [Chapter 2 Mainboard basics: 05. Restore the factory image system] tutorial: completing it writes the SUPER (Jetpack7.2.1) system to the SSD.

Note: you have to prepare an SSD enclosure in advance

2.3. SSD expansion

Refer to the [Chapter 2 Mainboard basics: SSD expansion] tutorial: completing it allocates the unallocated space of the SSD.
