Development board: Jetson Orin series mainboard

DeepSeek-R1 is an open source large language model (LLM) designed by DeepSeek for understanding and generating code.

1. Model size

Model	Size
deepseek-r1:1.5b	1.1GB
deepseek-r1:7b	4.7GB
deepseek-r1:8b	5.2GB

2. Performance

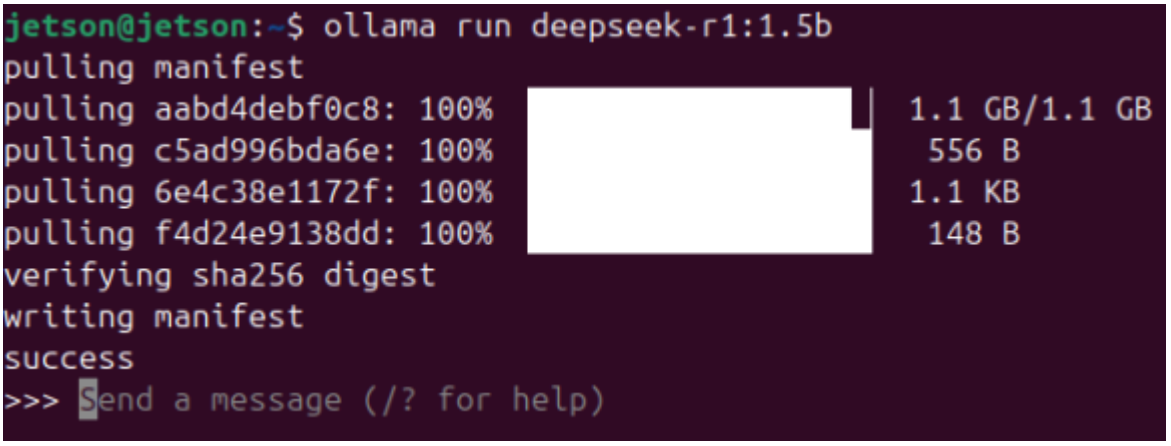

3. Using DeepSeek-R1

3.1 Run DeepSeek-R1

Use the run command to start running the model; if the model has not been downloaded before, it is pulled automatically from the Ollama model library:

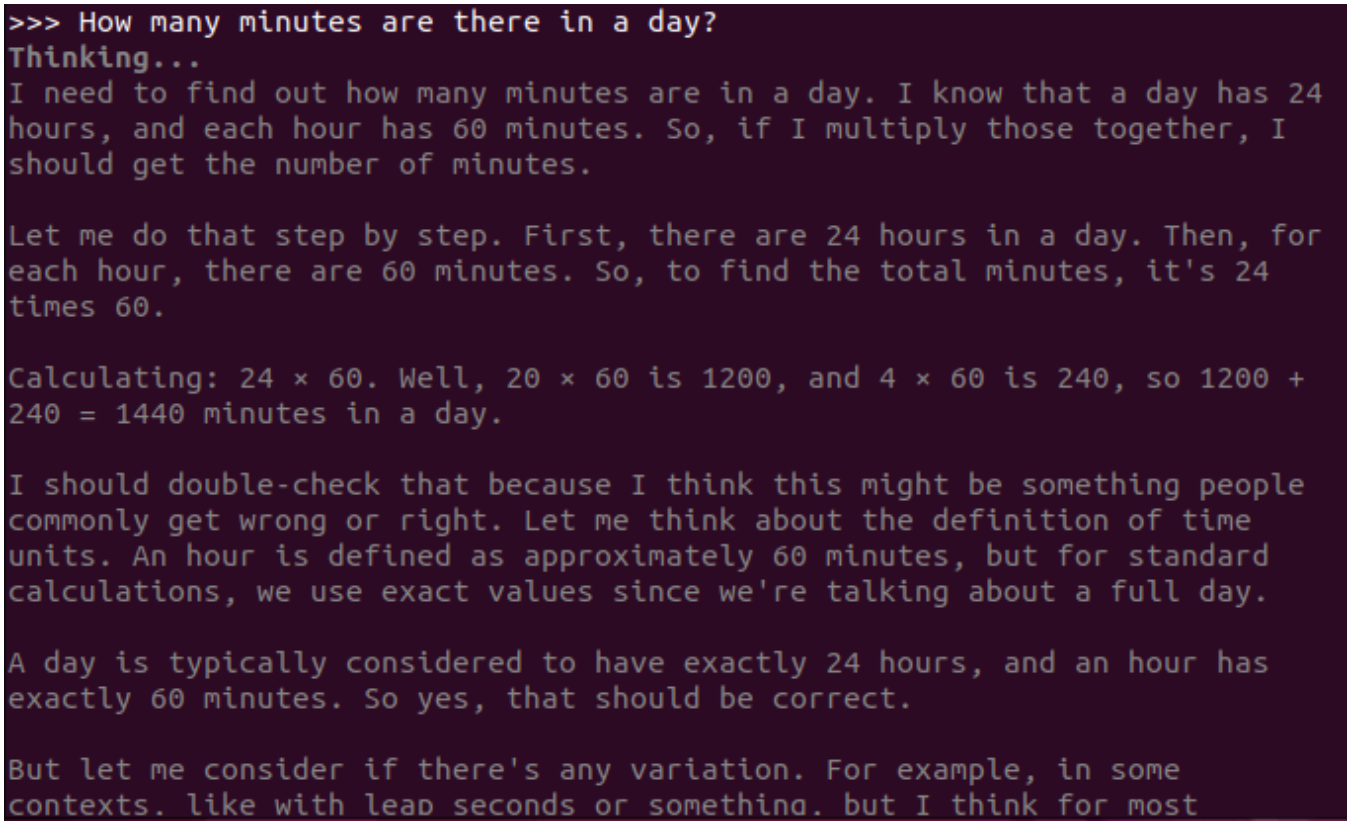

```
ollama run deepseek-r1:1.5b
```

3.2 Start a conversation

```
How many minutes are there in a day?
```

The time it takes to answer depends on the hardware configuration, so be patient!

3.3 End the conversation

Use the `Ctrl+d` shortcut or `/bye` to end the conversation!
