Docker installation

Docker installation

1. Update the system software
2. Official script installation
    2.1. Install curl
    2.2. Download the script
    2.3. Run the script
3. Installation via the Tsinghua mirror
    3.1. Install the dependencies
    3.2. Add the Docker source
    3.3. Install Docker
4. Add access permissions

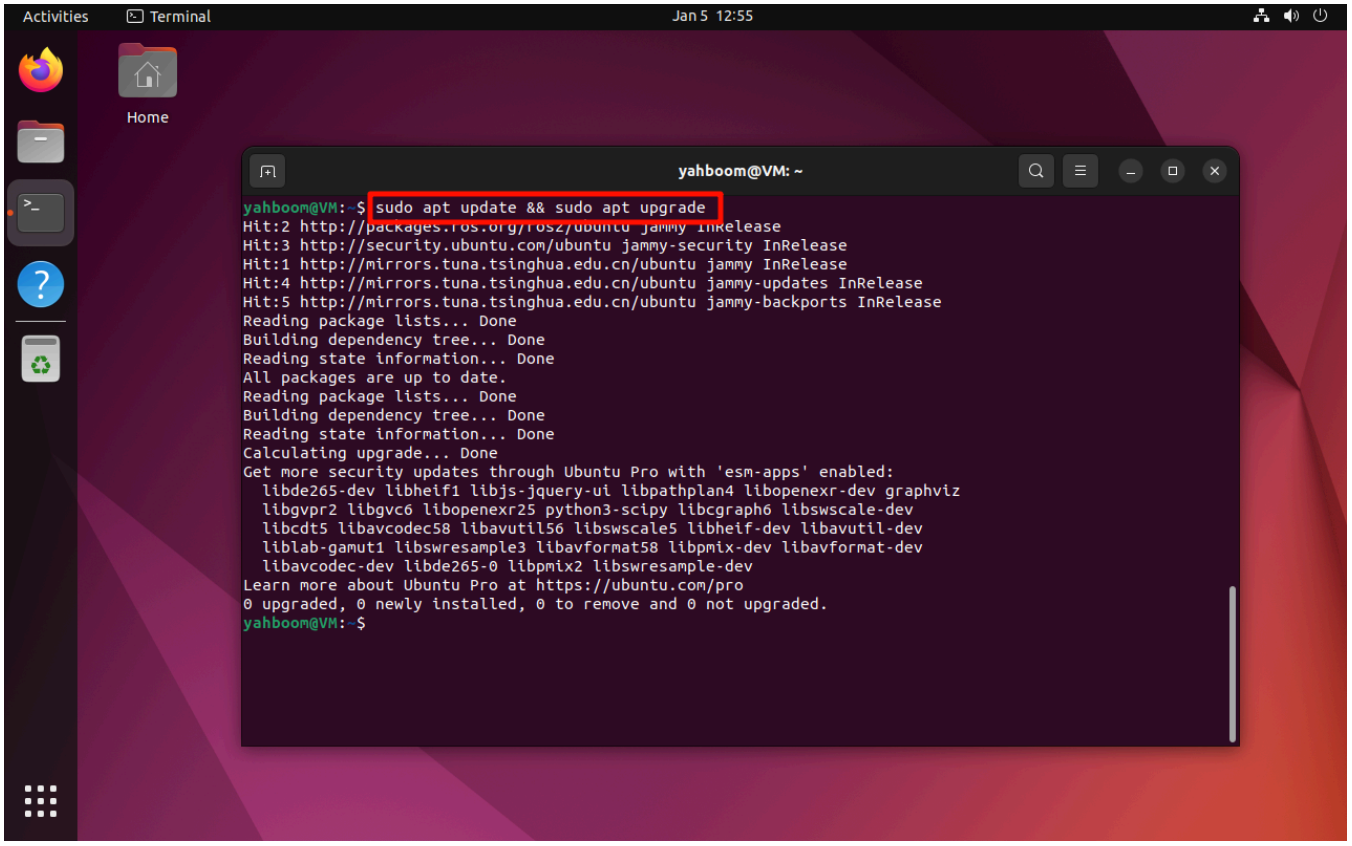

The tutorial demonstrates both the script installation and the manual installation of Docker. The official Docker script is not recommended for users in China.

```
Pulling Docker images online may not be possible in China at present, the tutorial is for
demonstration only
```

1. Update the system software

Make sure the system packages are up to date: if the system environment has version dependency problems, it is enough to update the package source list.

```
sudo apt update && sudo apt upgrade
```

2. Official script installation

2.1. Install curl

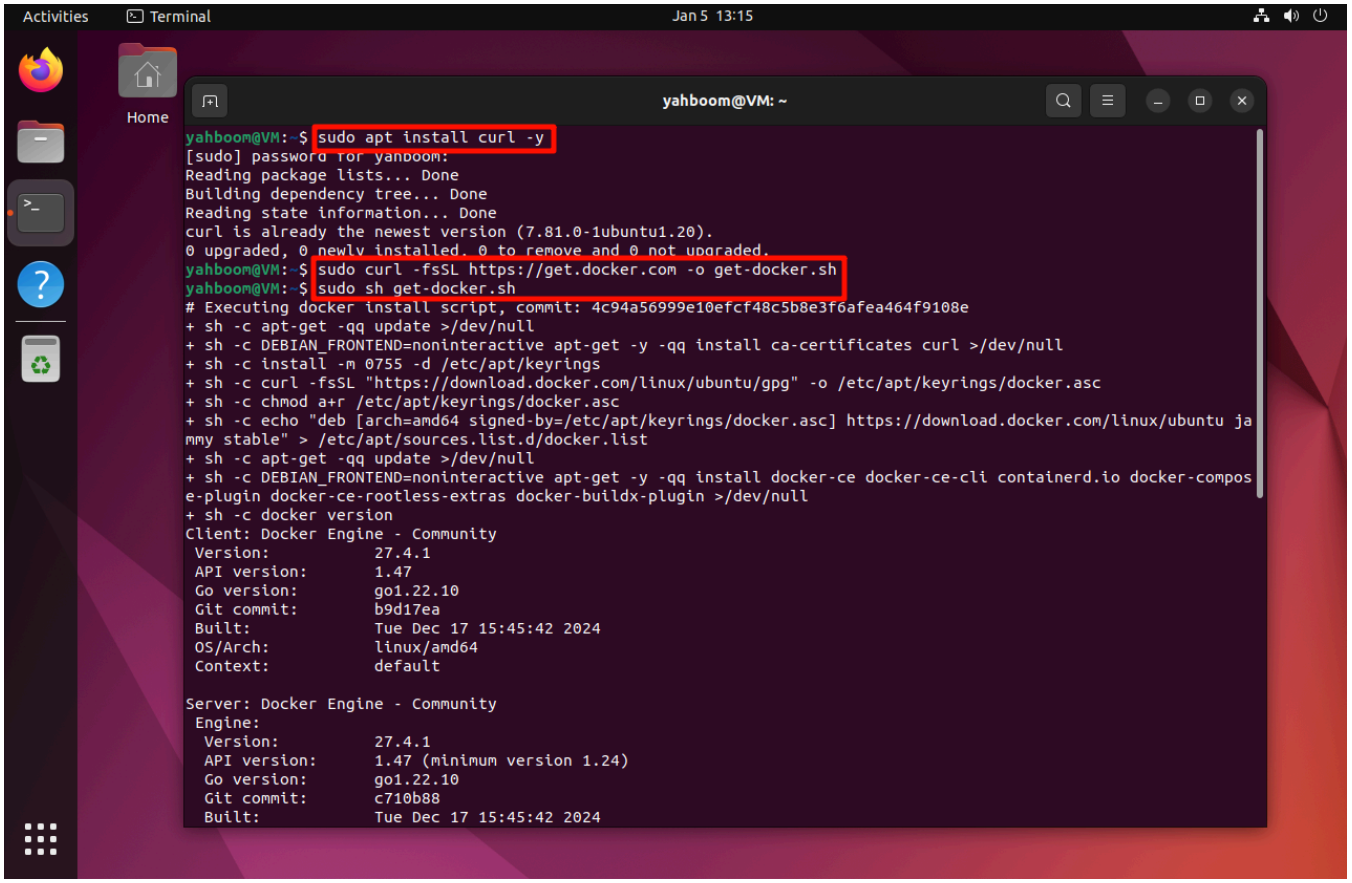

```
sudo apt install curl -y
```

2.2. Download the script

```
sudo curl -fsSL https://get.docker.com -o get-docker.sh
```

2.3. Run the script

```
sudo sh get-docker.sh
```

3. Installation via the Tsinghua mirror

Users in China can try installing Docker from the Tsinghua University mirror.

3.1. Install the dependencies

```
sudo apt install ca-certificates curl gnupg lsb-release -y
```

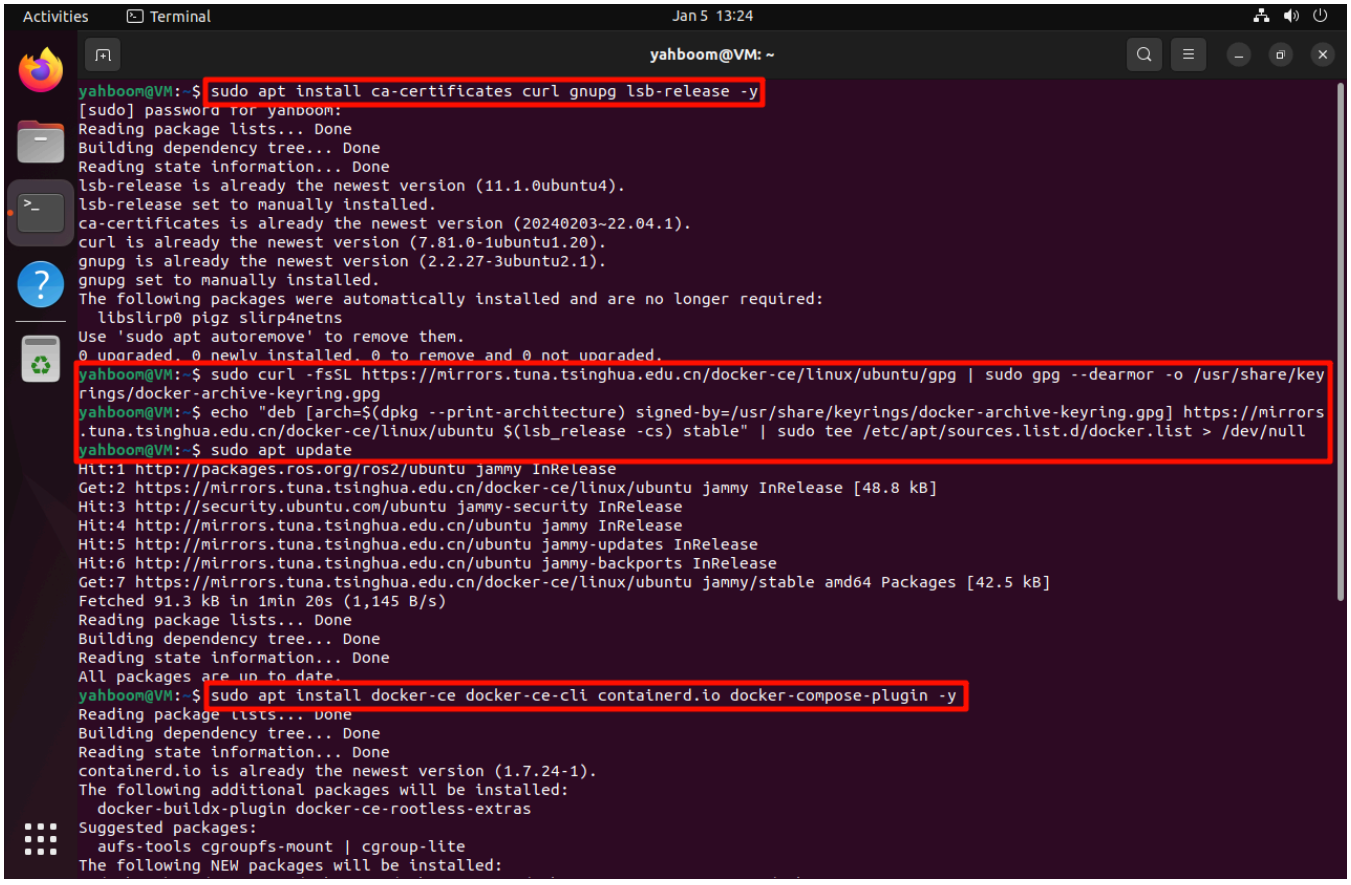

3.2. Add the Docker source

```
sudo curl -fsSL https://mirrors.tuna.tsinghua.edu.cn/docker-ce/linux/ubuntu/gpg | sudo gpg --dearmor -o /usr/share/keyrings/docker-archive-keyring.gpg
```

```
echo "deb [arch=$(dpkg --print-architecture) signed-by=/usr/share/keyrings/docker-archive-keyring.gpg] https://mirrors.tuna.tsinghua.edu.cn/docker-ce/linux/ubuntu $(lsb_release -cs) stable" | sudo tee /etc/apt/sources.list.d/docker.list > /dev/null
```

3.3. Install Docker

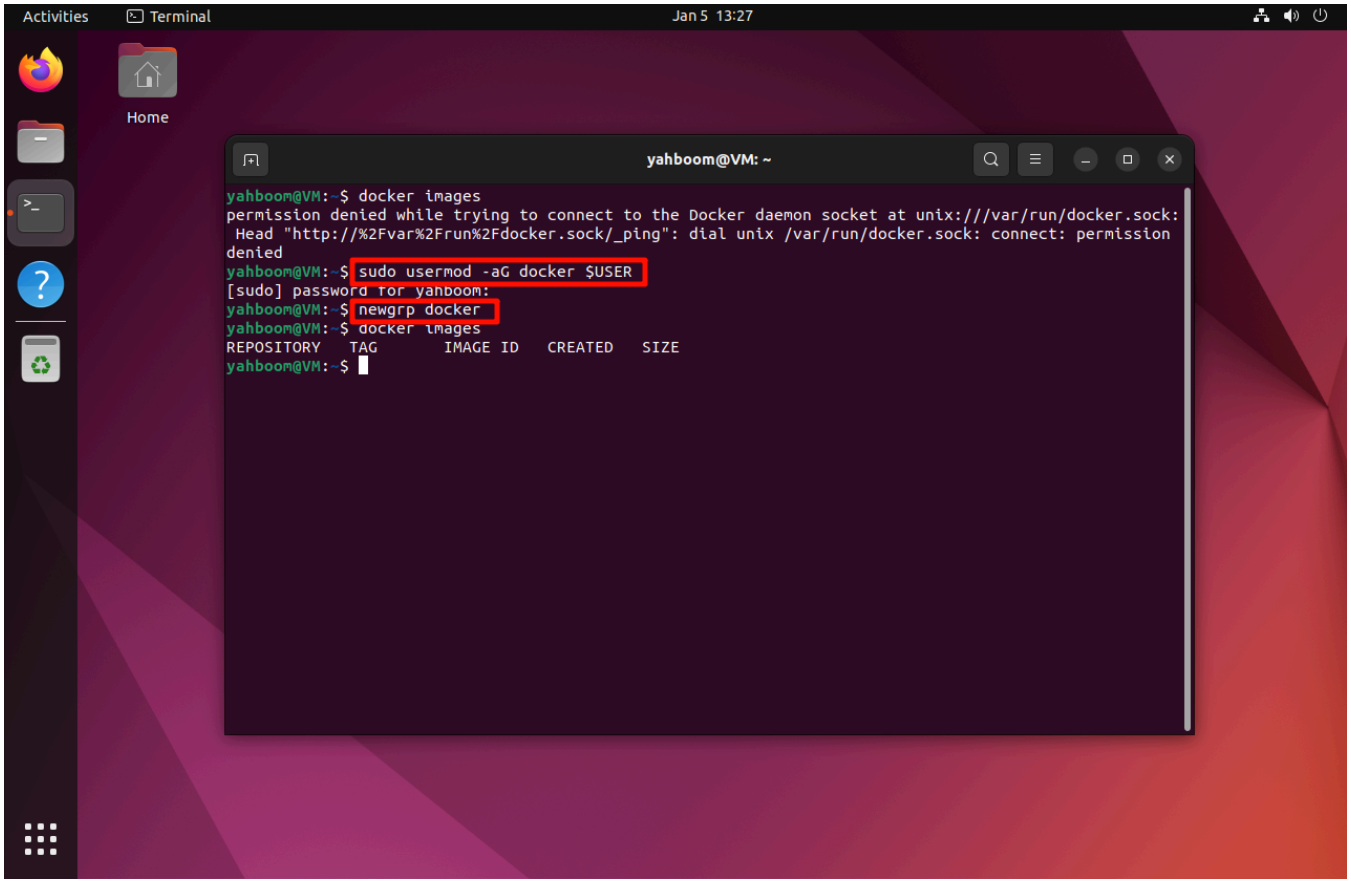

```
sudo apt update
sudo apt install docker-ce docker-ce-cli containerd.io docker-compose-plugin -y
```

4. Add access permissions

Give the current system user access to the Docker daemon, so that Docker commands can be used without the sudo command:

```
sudo usermod -aG docker $USER
newgrp docker
```
