# VSCode usage

**VSCode usage**

- 1. VSCode download
- 2. VSCode installation
  - 2.1. Open the installation package
  - 2.2. Accept the agreement
  - 2.3. Installation location
  - 2.4. Installation options
  - 2.5. Complete the installation
- 3. VSCode usage
  - 3.1. Basic use
  - 3.2. Extension use
    - 3.2.1. Basic extensions
      - Python
      - C/C++
      - Material Icon Theme
    - 3.2.2. Remote-SSH
      - ssh installation
      - ssh usage

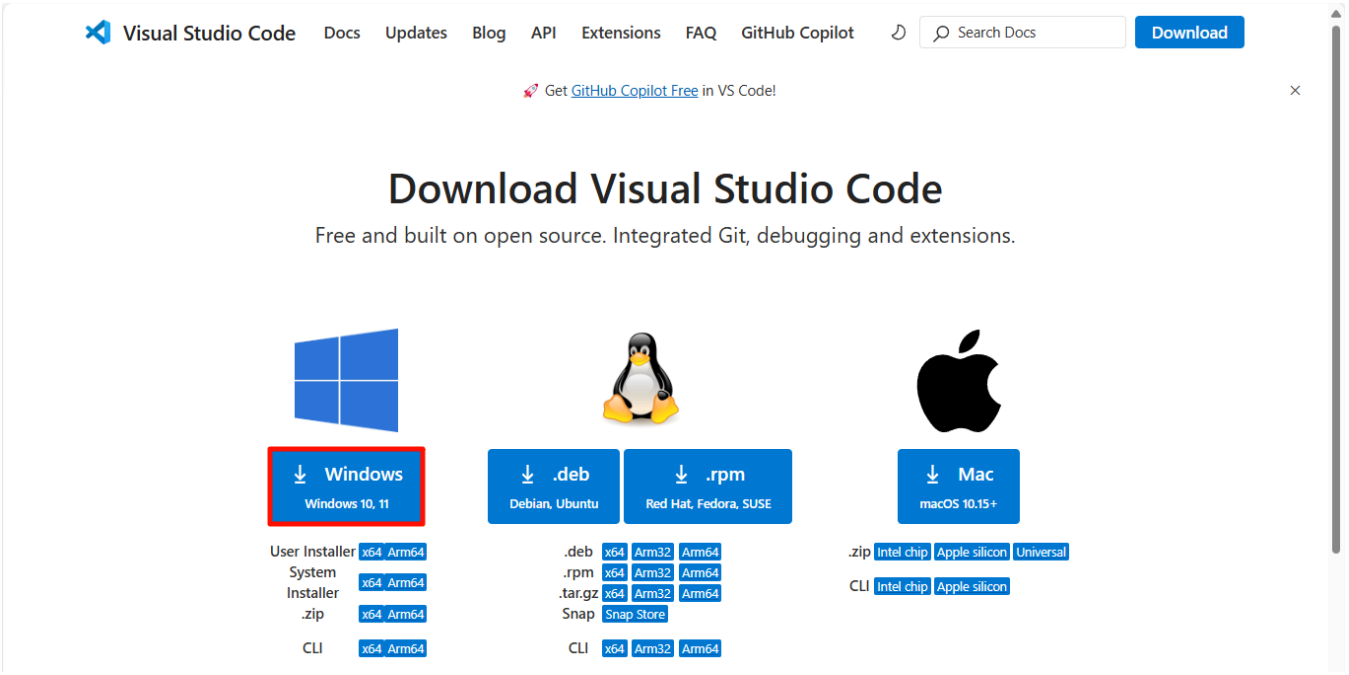

The tutorial demonstrates installing VSCode on the Windows platform and the steps for SSH remote access.

```
Users can use this method to connect remotely to boards such as the Raspberry Pi and the Jetson
```

## 1. VSCode download

Official website: https://code.visualstudio.com/

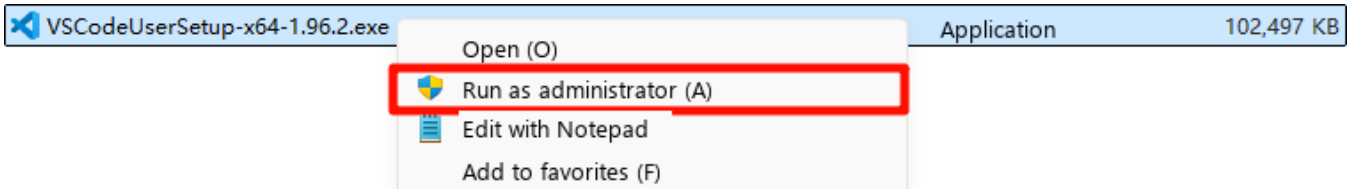

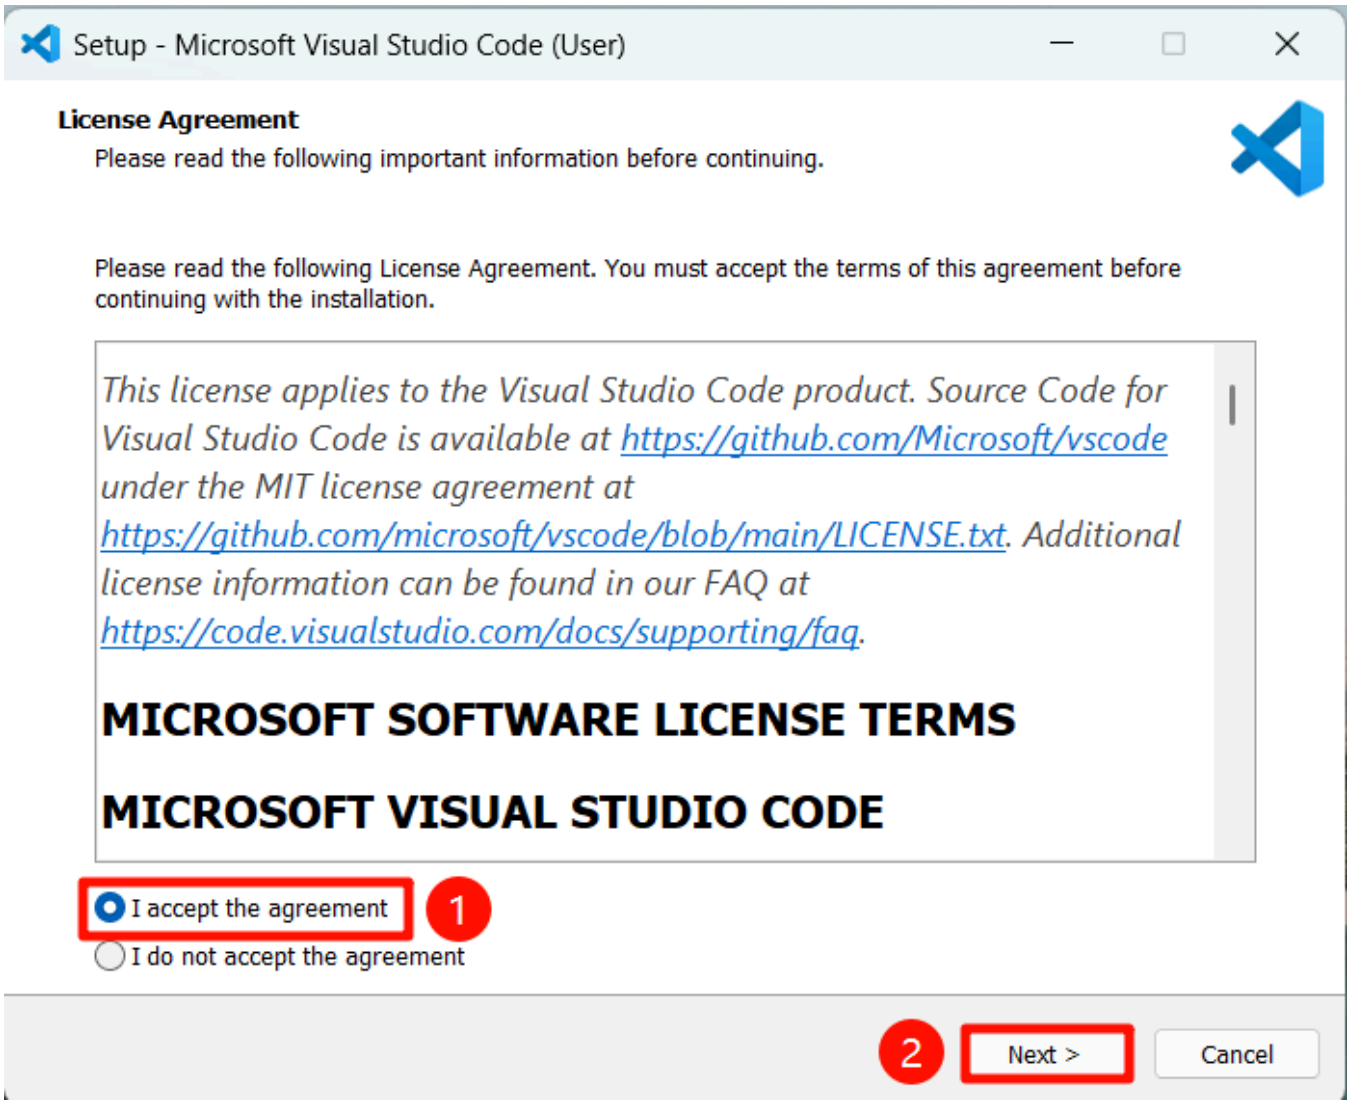

# 2. VSCode installation

## 2.1. Open the installation package

Open VSCodeUserSetup-x64-xxx.exe as an administrator

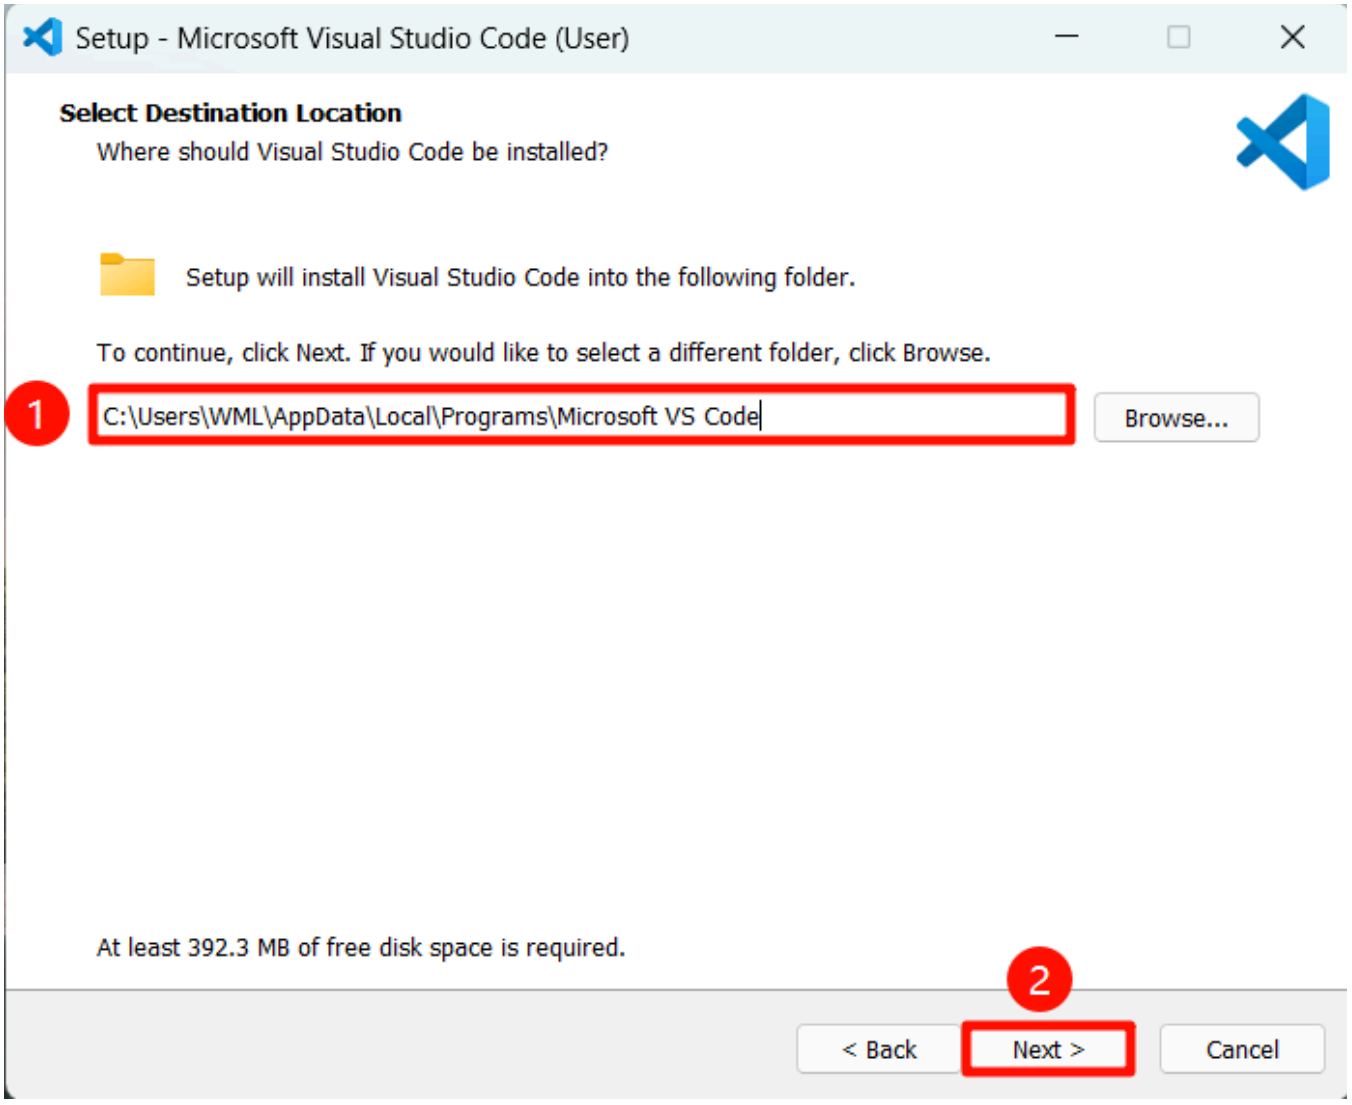

## 2.2. Accept the agreement

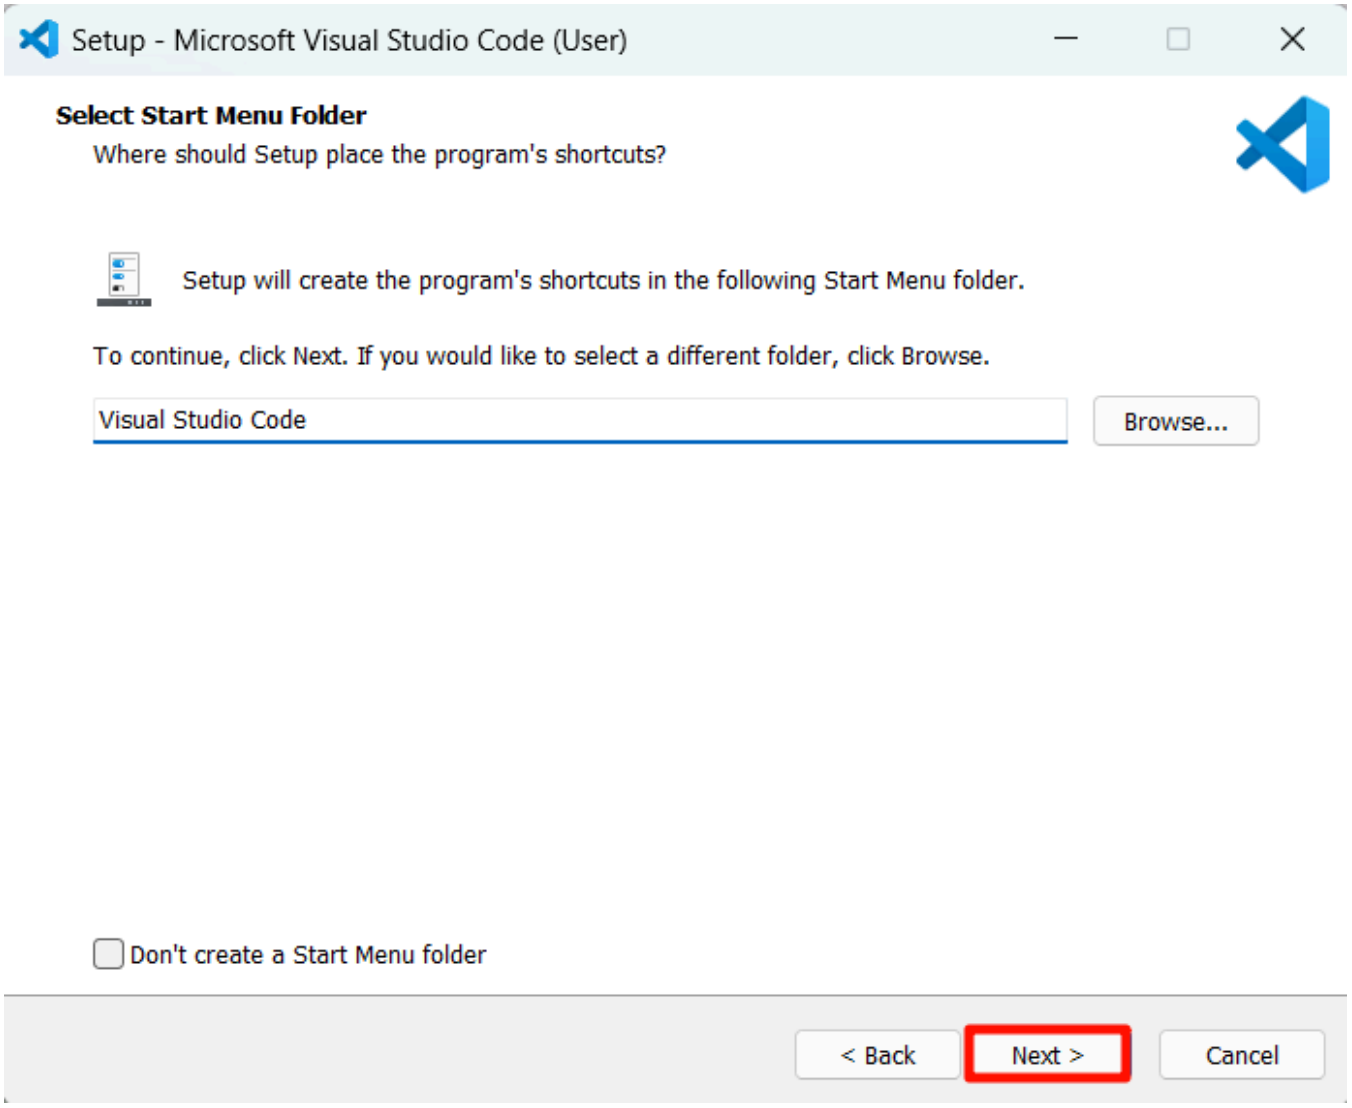

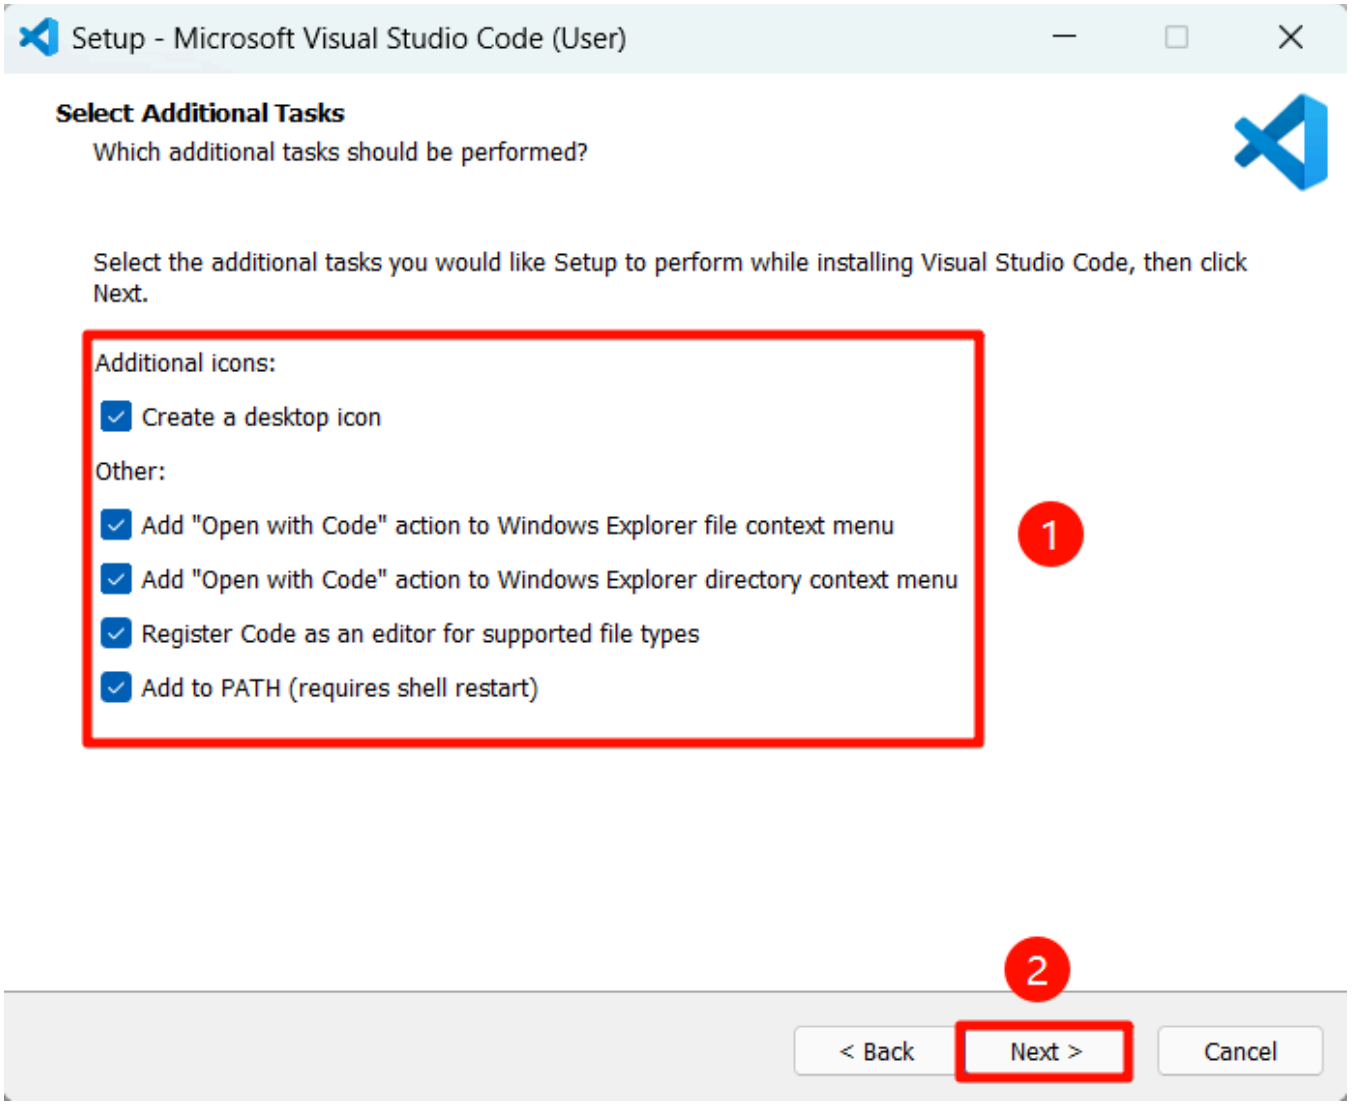

## 2.3. Installation location

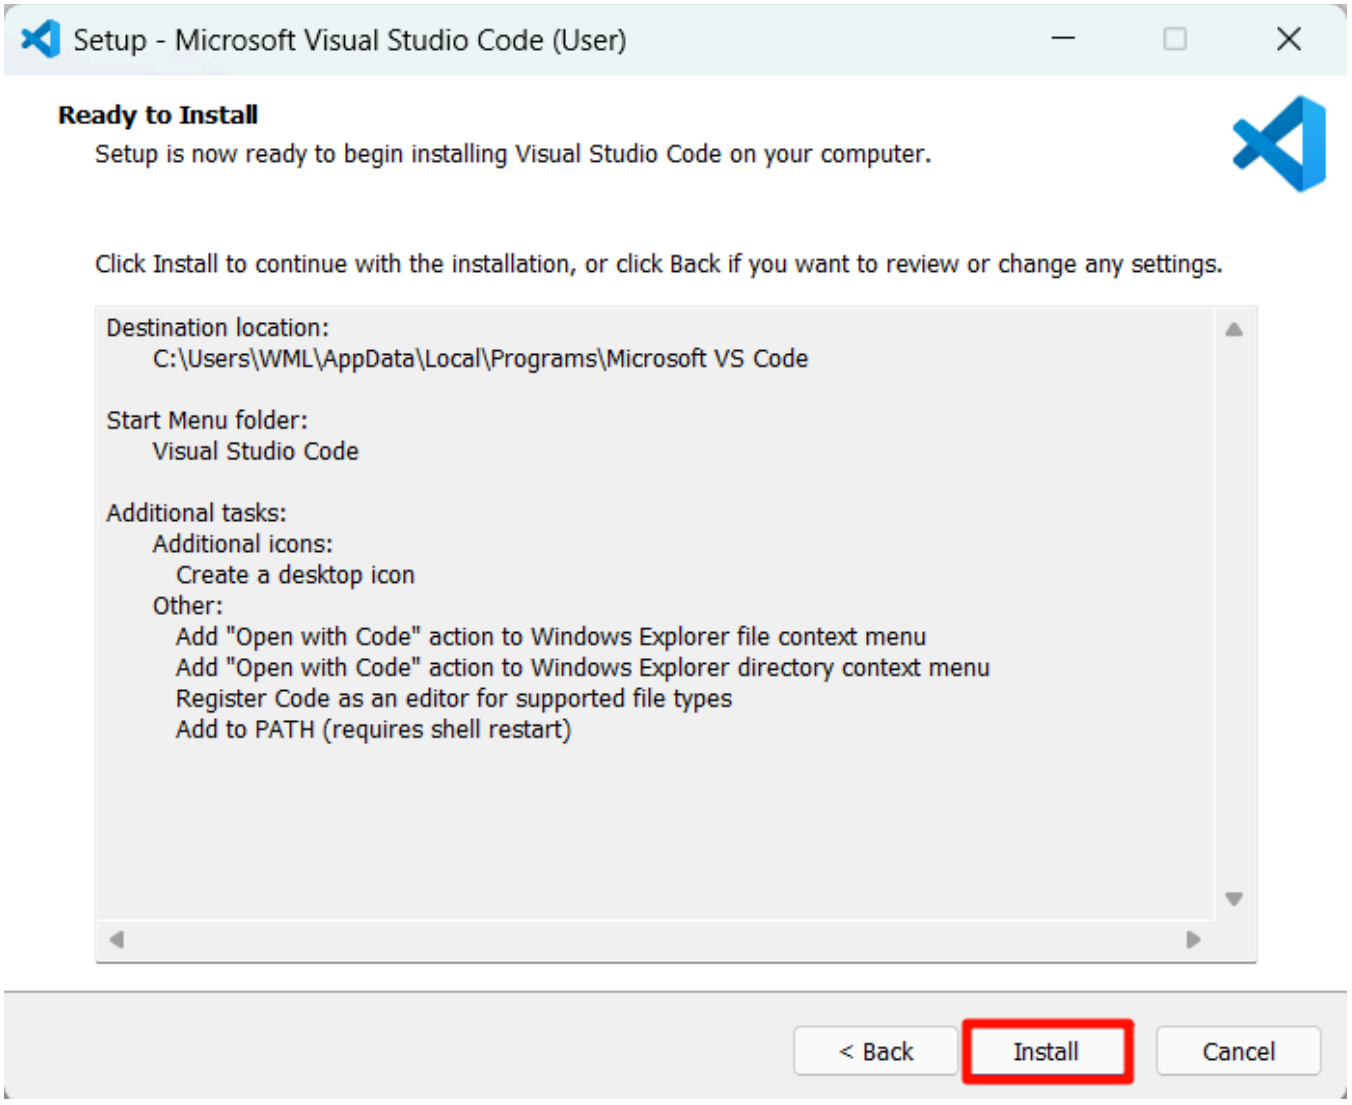

It is recommended to keep the default installation location of the software:

Setup - Microsoft Visual Studio Code (User)
Select Destination Location
Where should Visual Studio Code be installed?
Setup will install Visual Studio Code into the following folder.
To continue, click Next. If you would like to select a different folder, click Browse.
1
C:\Users\WML\AppData\Local\Programs\Microsoft VS Code
Browse...
At least 392.3 MB of free disk space is required.
2
< Back
Next >
Cancel

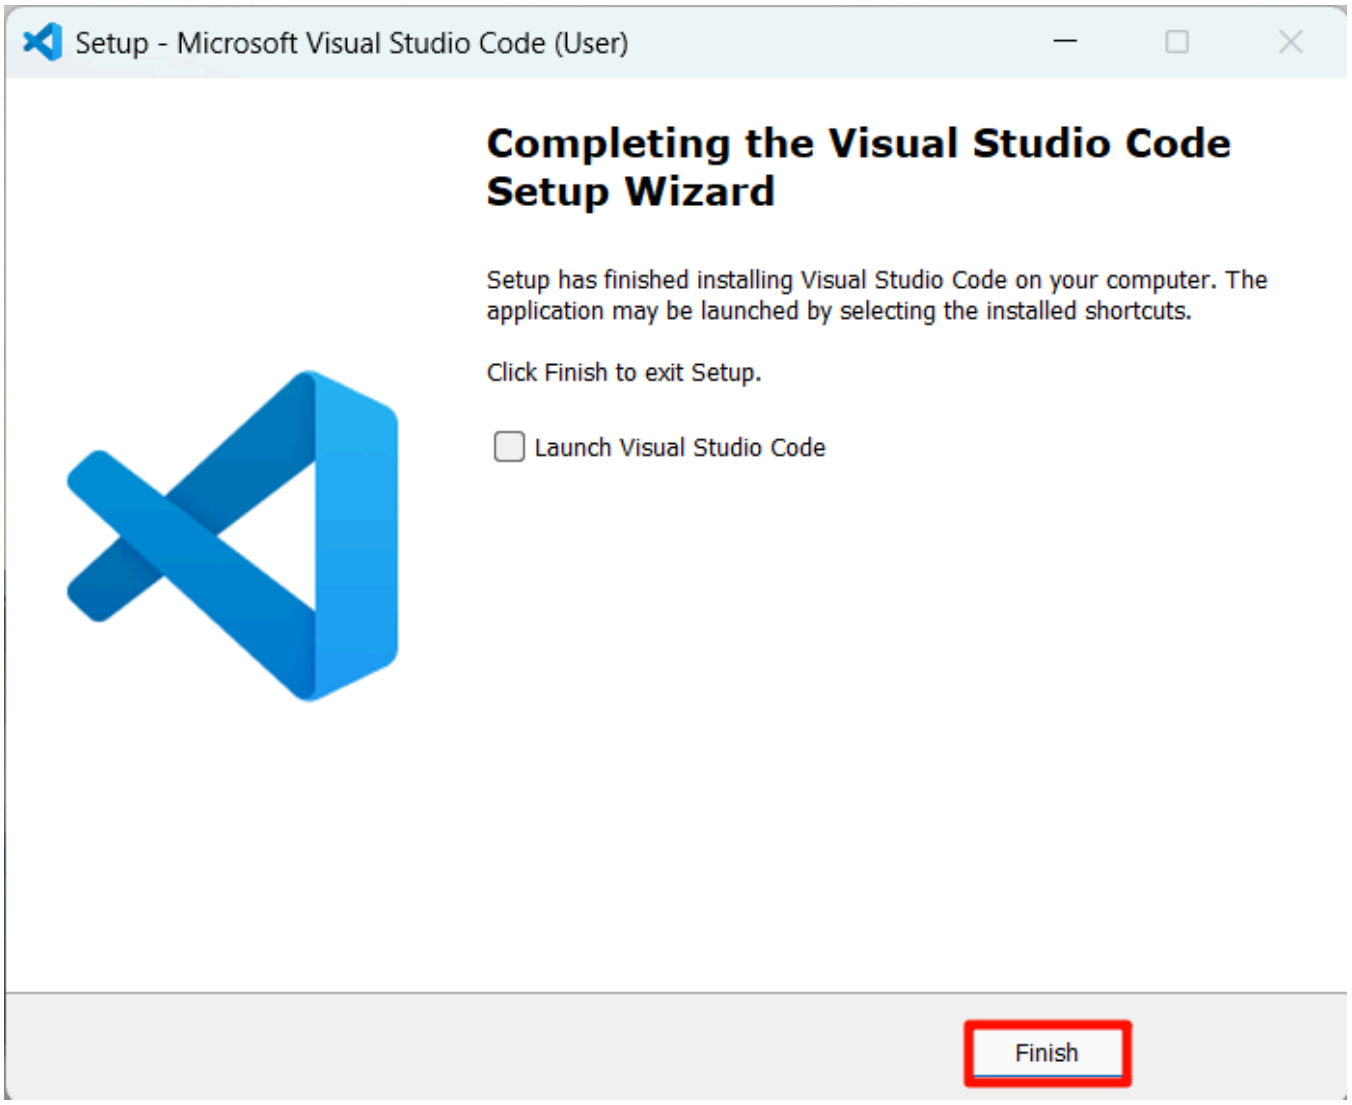

## 2.4. Installation options

Setup - Microsoft Visual Studio Code (User)
Select Additional Tasks
Which additional tasks should be performed?
Select the additional tasks you would like Setup to perform while installing Visual Studio Code, then click Next.
Additional icons:
Create a desktop icon
Other:
Add "Open with Code" action to Windows Explorer file context menu
Add "Open with Code" action to Windows Explorer directory context menu
Register Code as an editor for supported file types
Add to PATH (requires shell restart)

2
< Back
Next >
Cancel

Setup - Microsoft Visual Studio Code (User)
Ready to Install
Setup is now ready to begin installing Visual Studio Code on your computer.
Click Install to continue with the installation, or click Back if you want to review or change any settings.
Destination location:
C:\Users\WML\AppData\Local\Programs\Microsoft VS Code
Start Menu folder:
Visual Studio Code
Additional tasks:
Additional icons:
Create a desktop icon
Other:
Add "Open with Code" action to Windows Explorer file context menu
Add "Open with Code" action to Windows Explorer directory context menu
Register Code as an editor for supported file types
Add to PATH (requires shell restart)
< Back
Install
Cancel

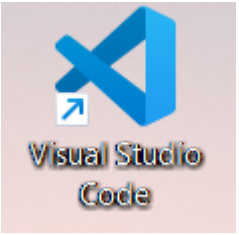

### 2.5. Complete the installation

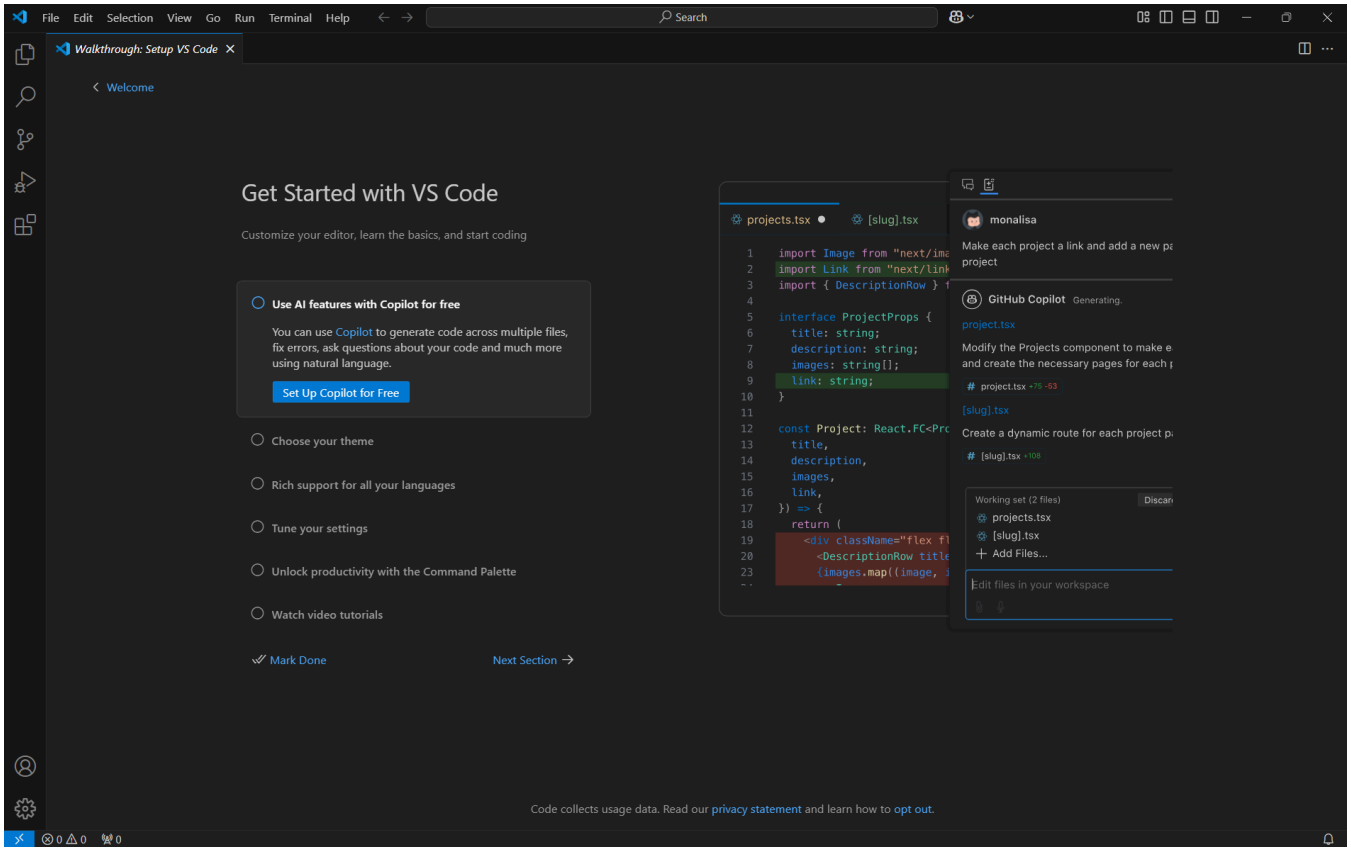

## 3. VSCode usage

### 3.1. Basic use

Double-click the "Visual Studio Code" icon to open the application:

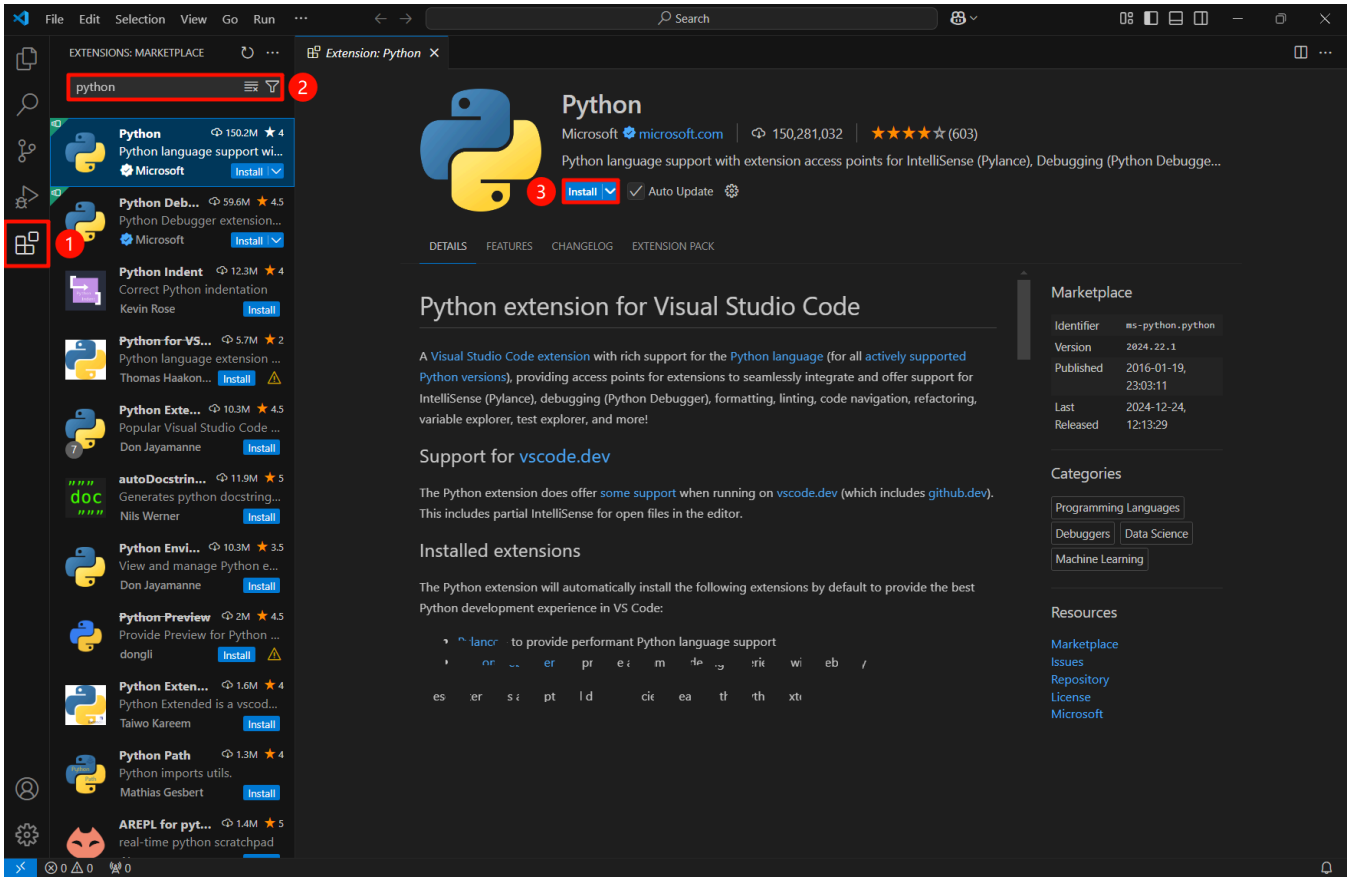

# 3.2. Extension use

## 3.2.1. Basic extensions

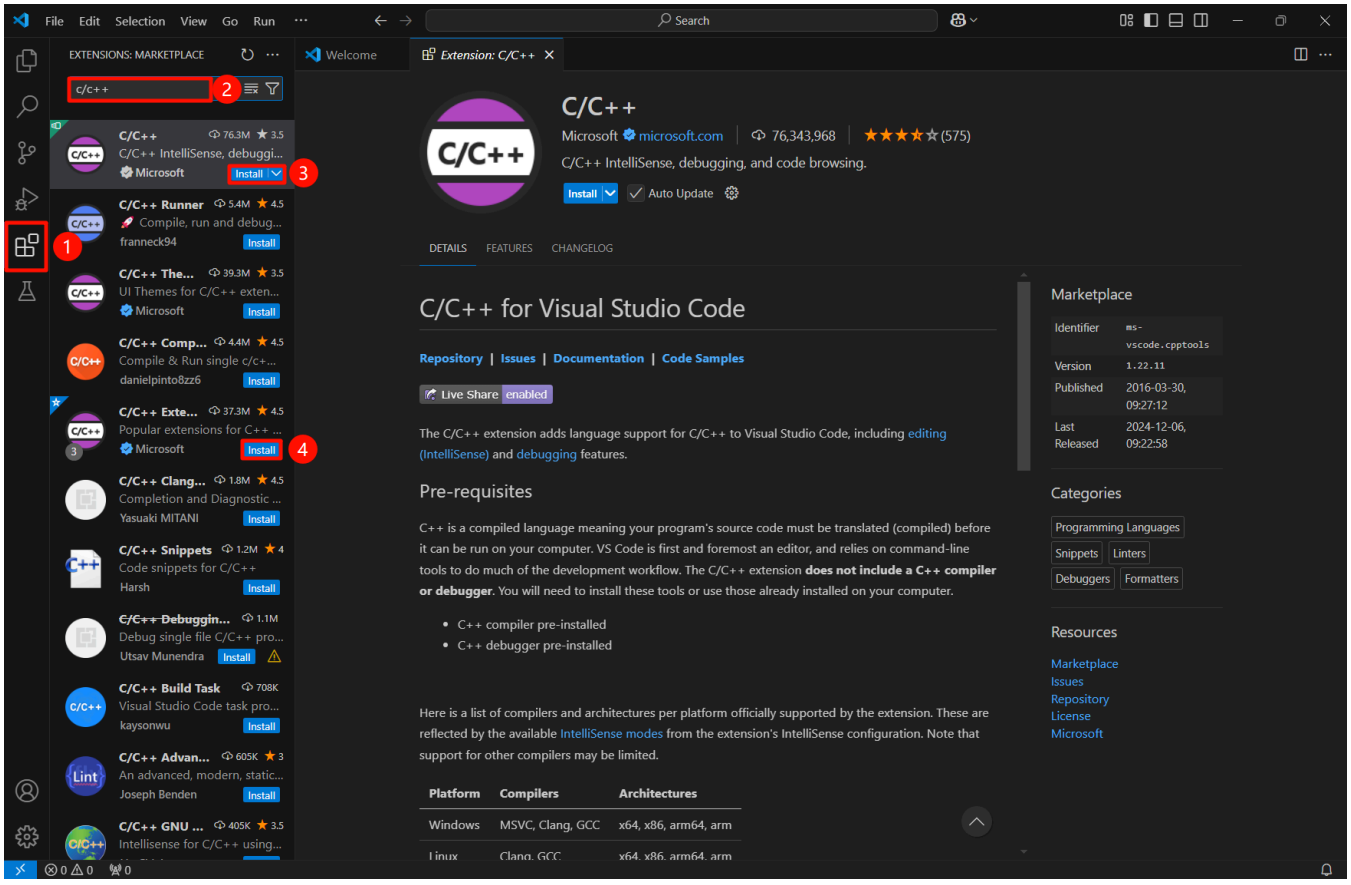

### Python

Search for "python" in the extension search bar and select Python to install it:

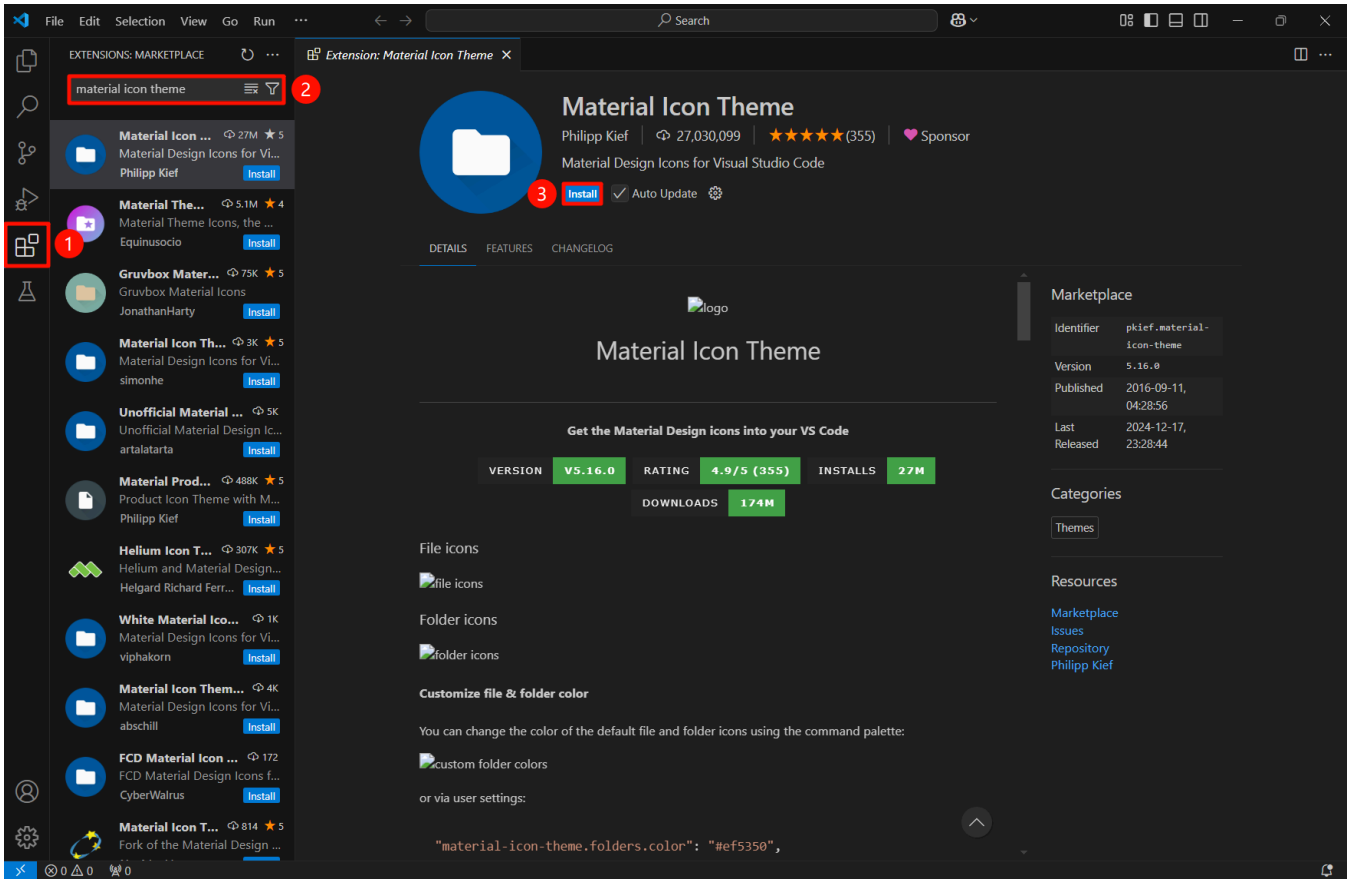

### C/C++

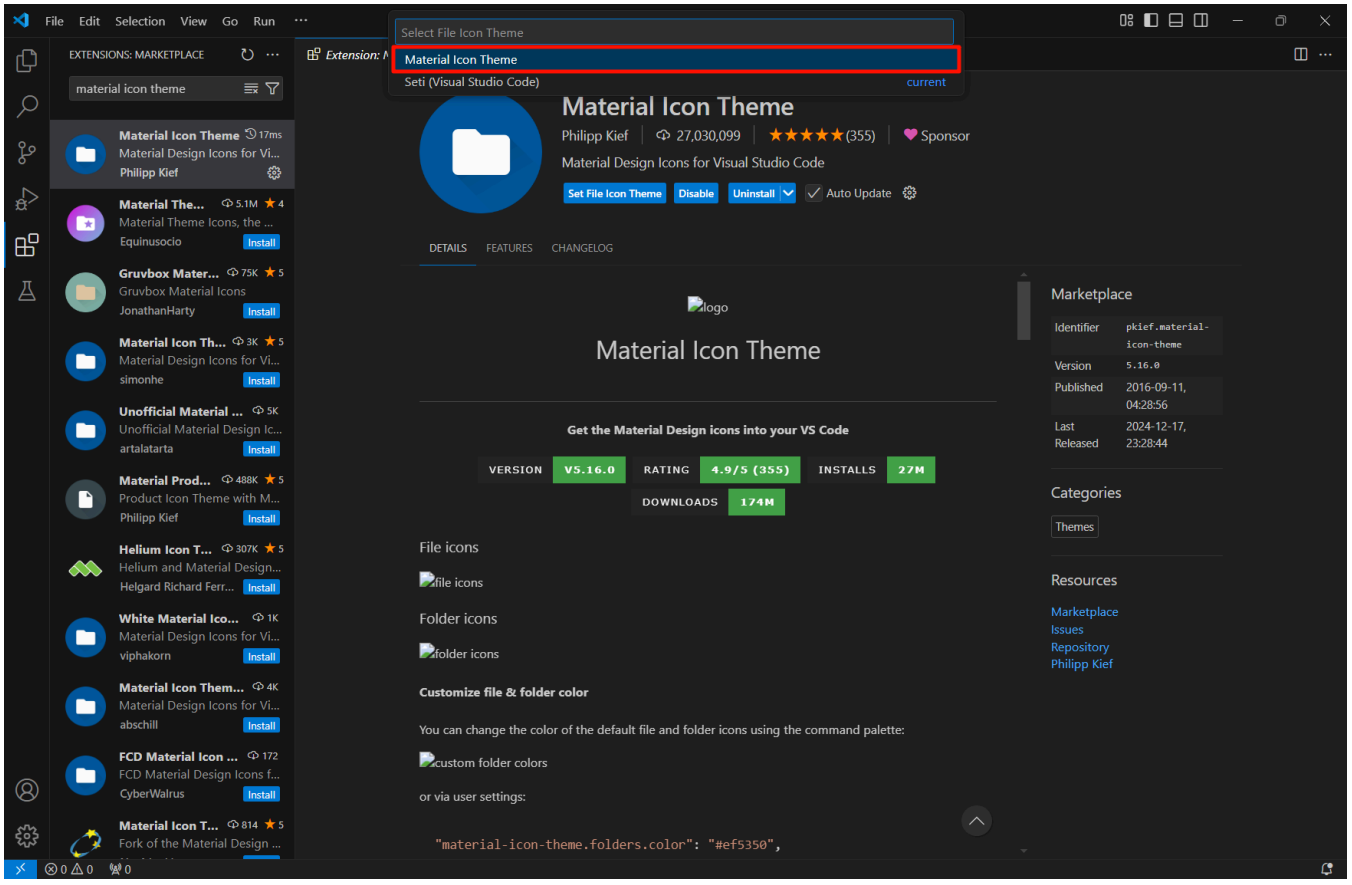

Search for "c/c++" in the extension search bar and select C/C++ and C/C++ Extension Pack to install them:

### Material Icon Theme

Search for "material icon theme" in the extension search bar and select Material Icon Theme to install it:

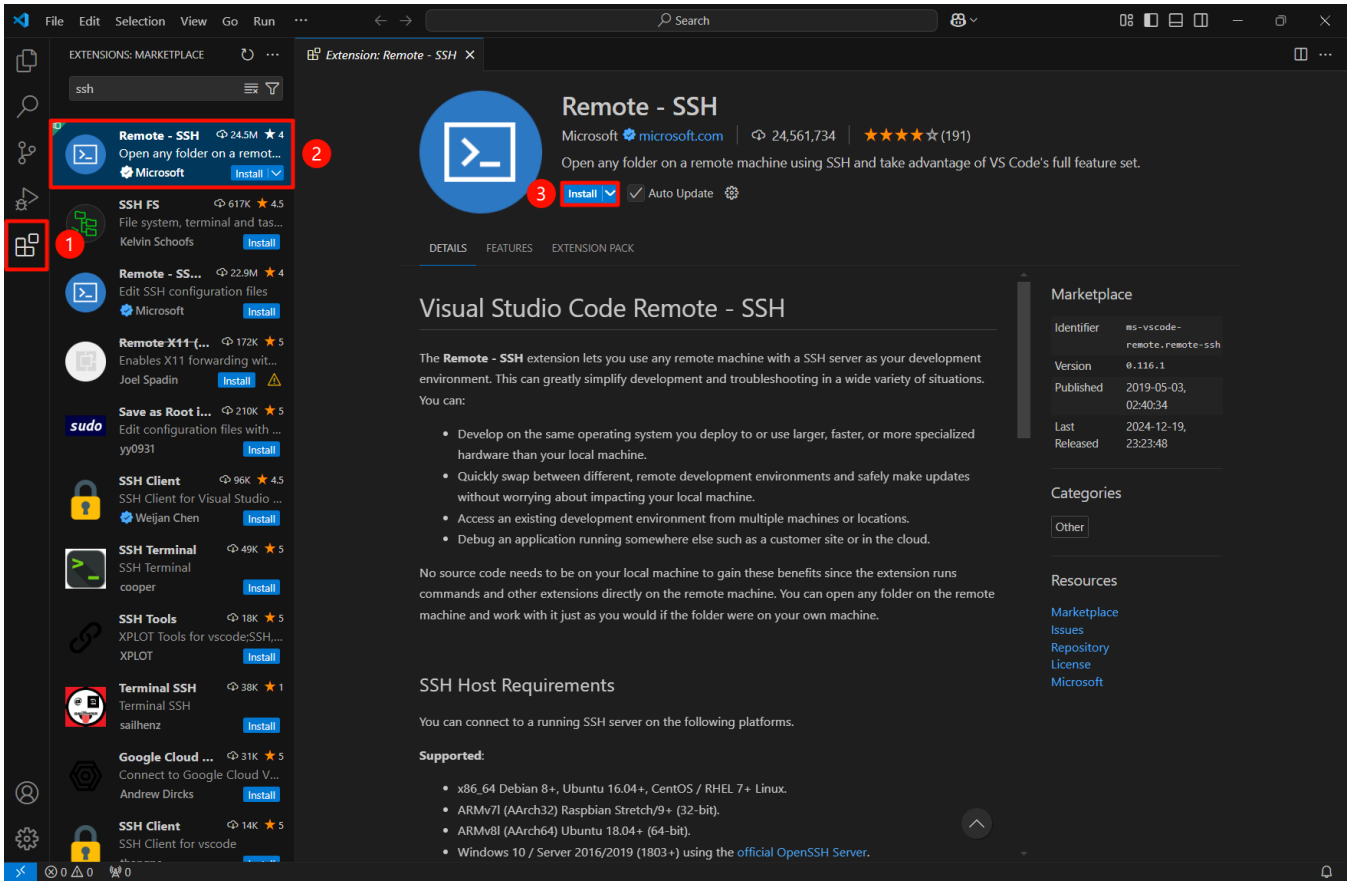

## 3.2.2. Remote-SSH

### ssh installation

Search for "ssh" in the extension search bar and select Remote-SSH to install it:

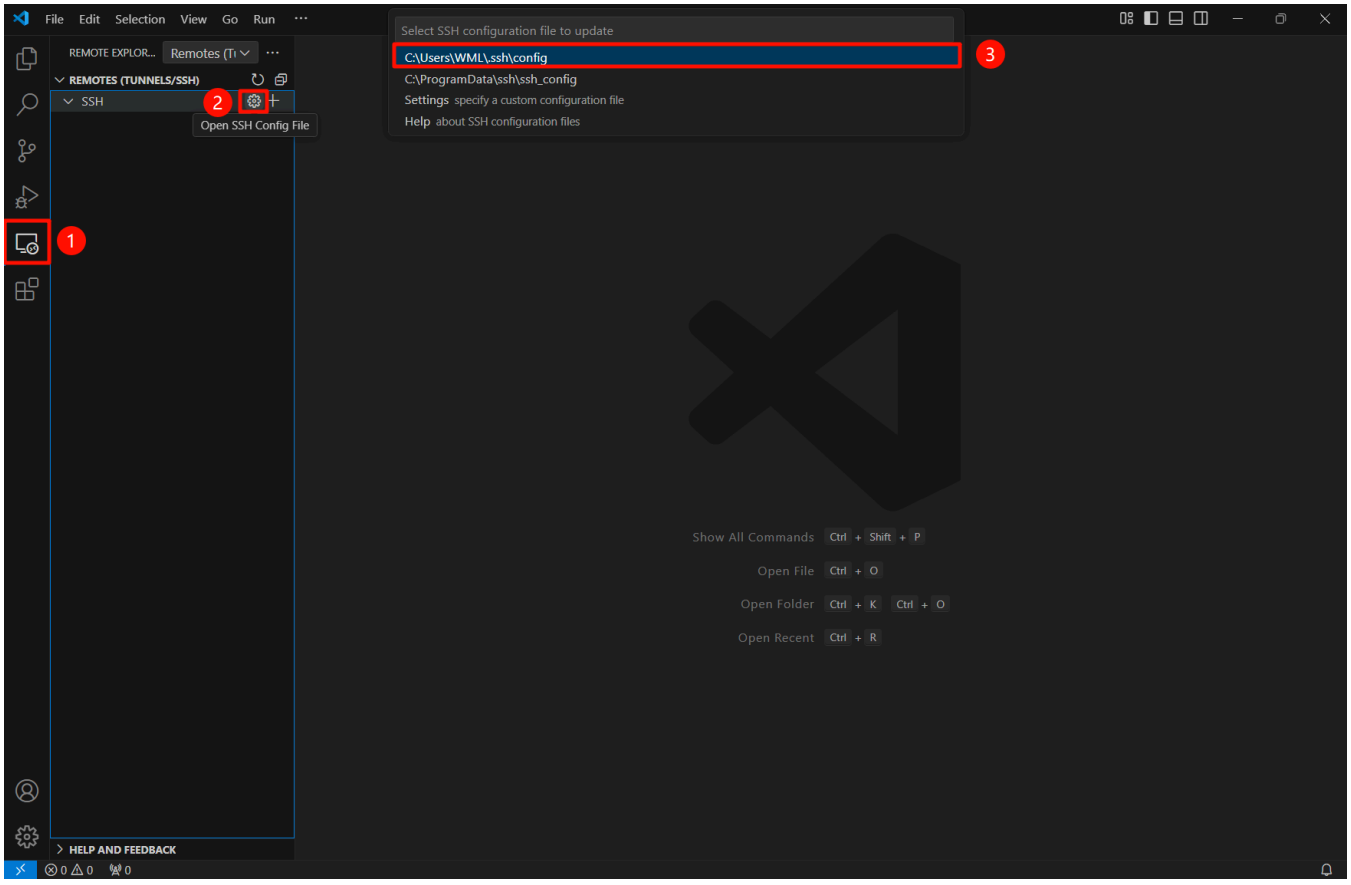

### ssh usage

After Remote-SSH is installed, you can use it directly from the status bar on the left!

```
Different users may have inconsistent user names in the paths of the configuration file, and this causes no impression at all
```

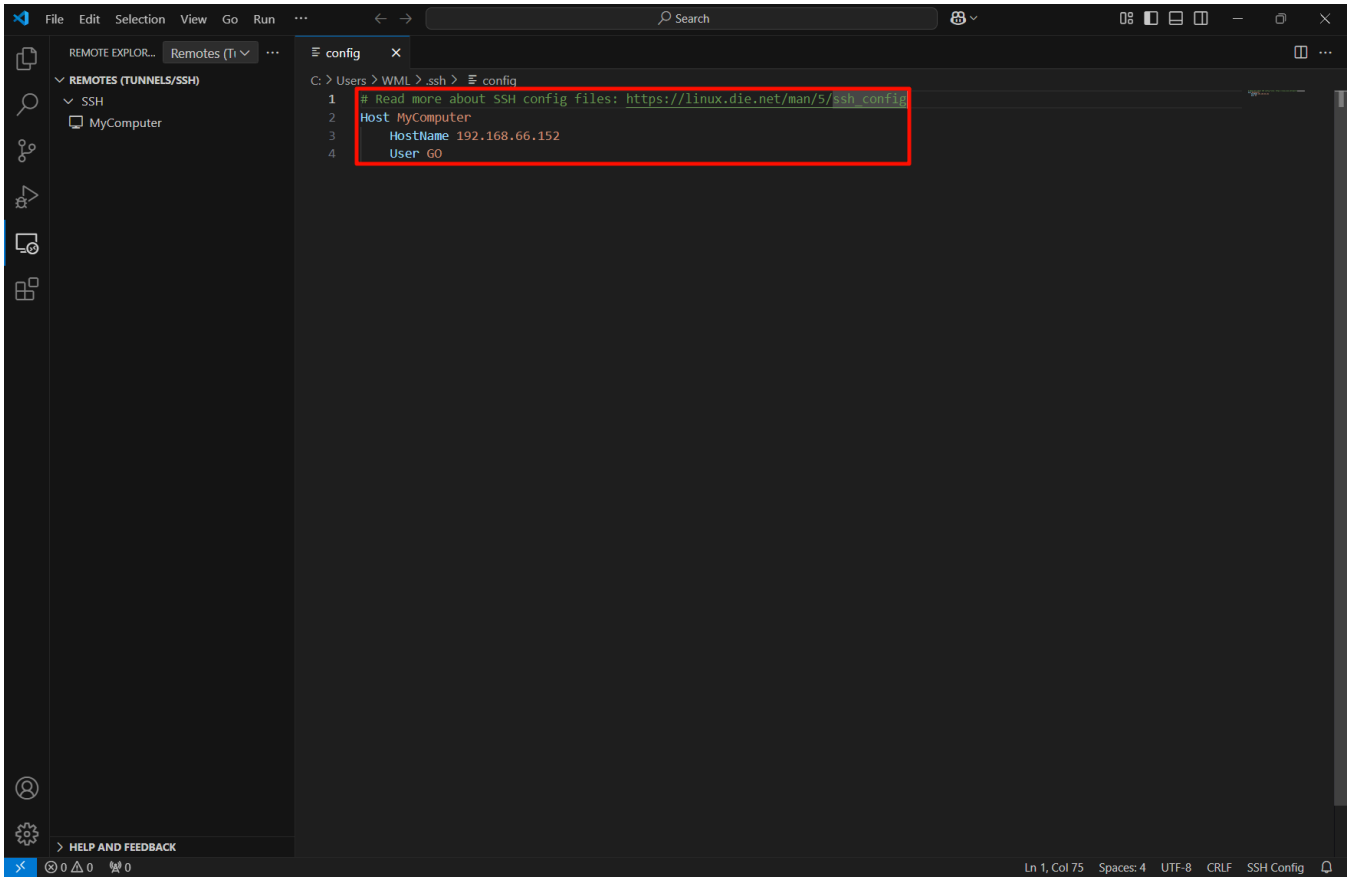

> **Configure the remote: modify the configuration file**

**Configure the remote: modify the configuration file**

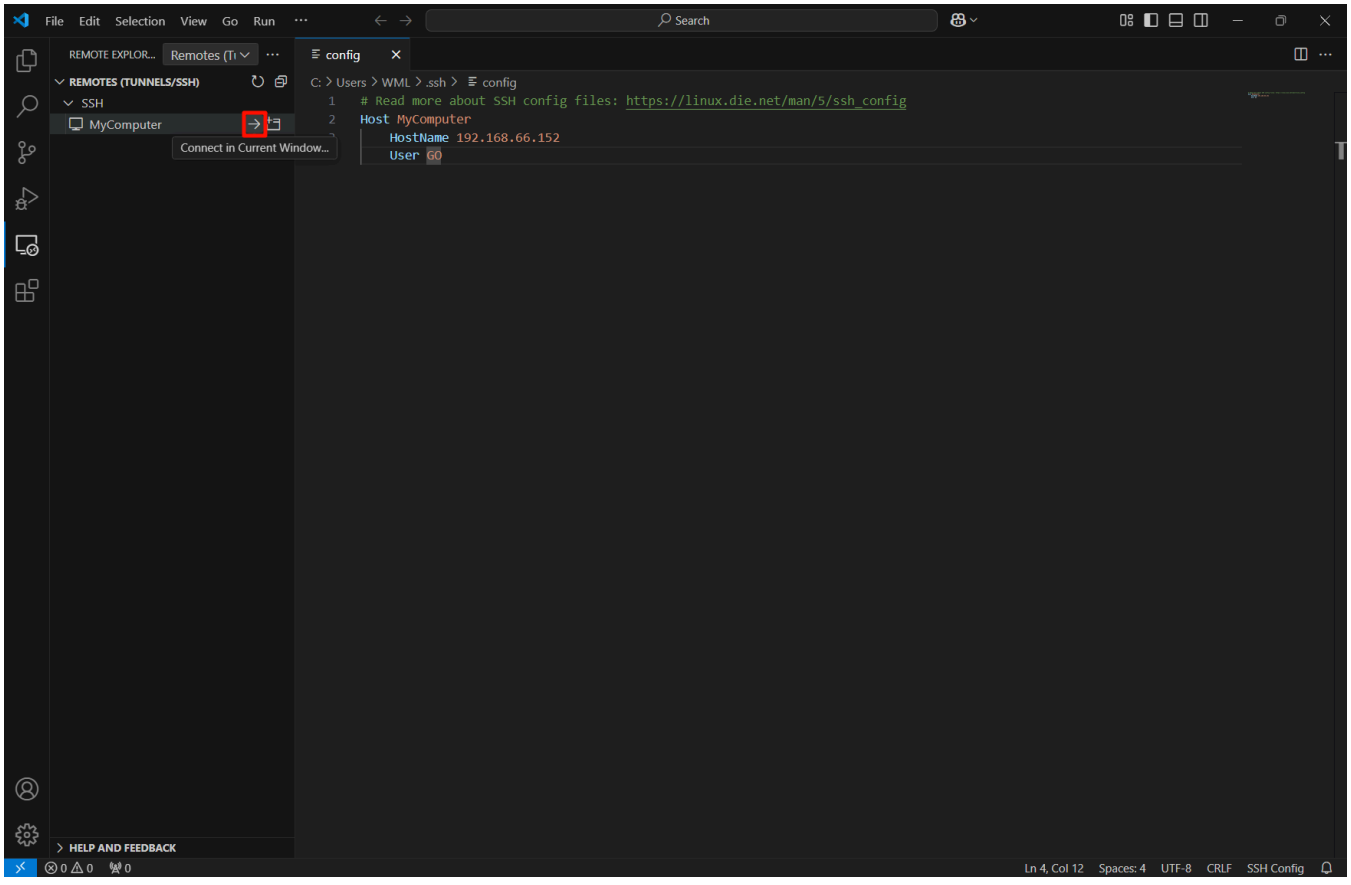

Fill in the information of the device that needs to be accessed remotely; the remote device must have the SSH service configured and support SSH remote access. After filling it in, press the Ctrl+S shortcut to save, and the corresponding SSH remote device is added automatically on the left.

```
# Read more about SSH config files: https://linux.die.net/man/5/ssh_config
Host MyComputer # Remote device alias
    HostName 192.168.66.152 # Remote device IP
    User GO # Remote device user name
```

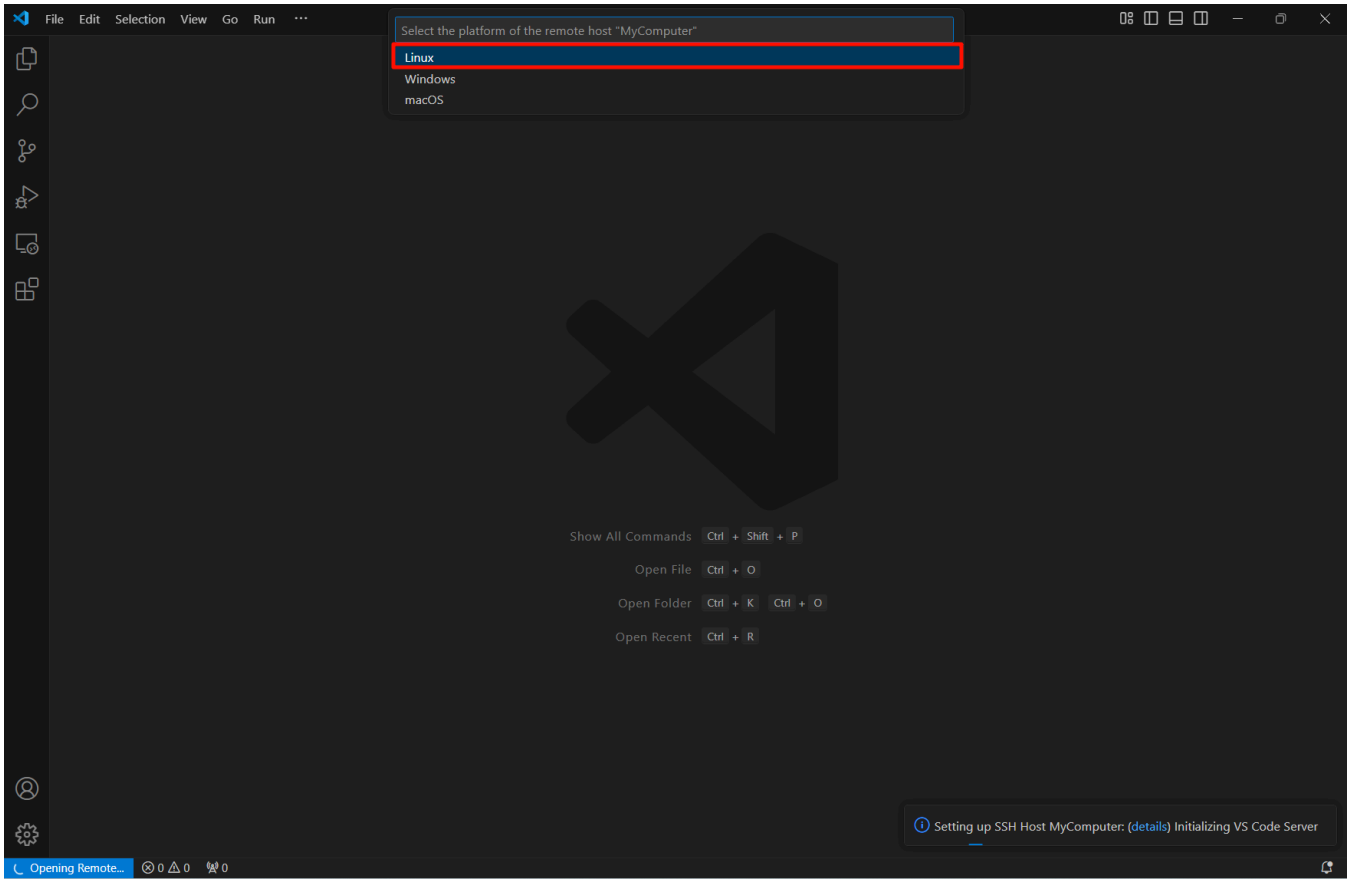

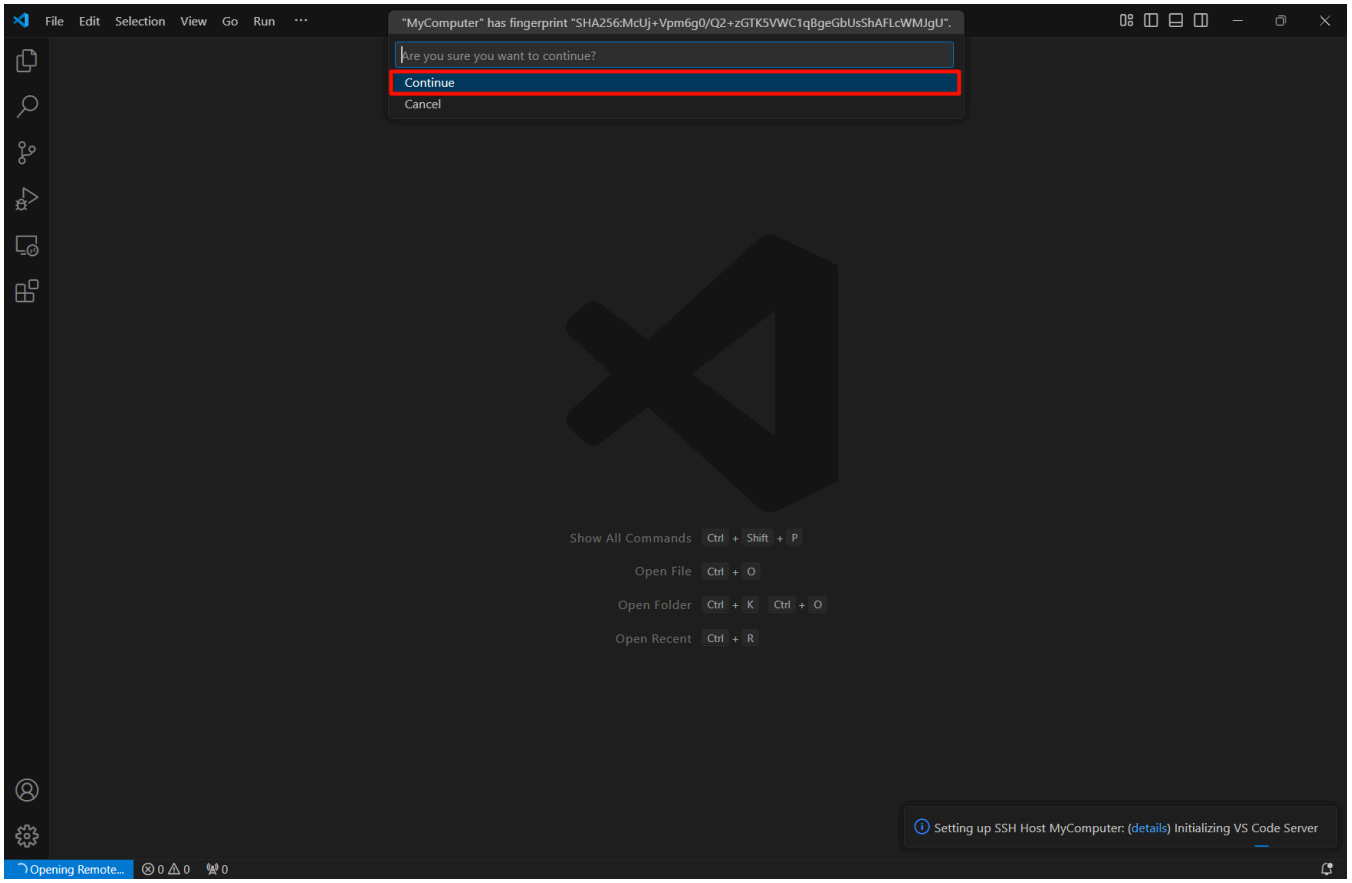

> **Remote**

Select the remote device for the SSH remote connection:

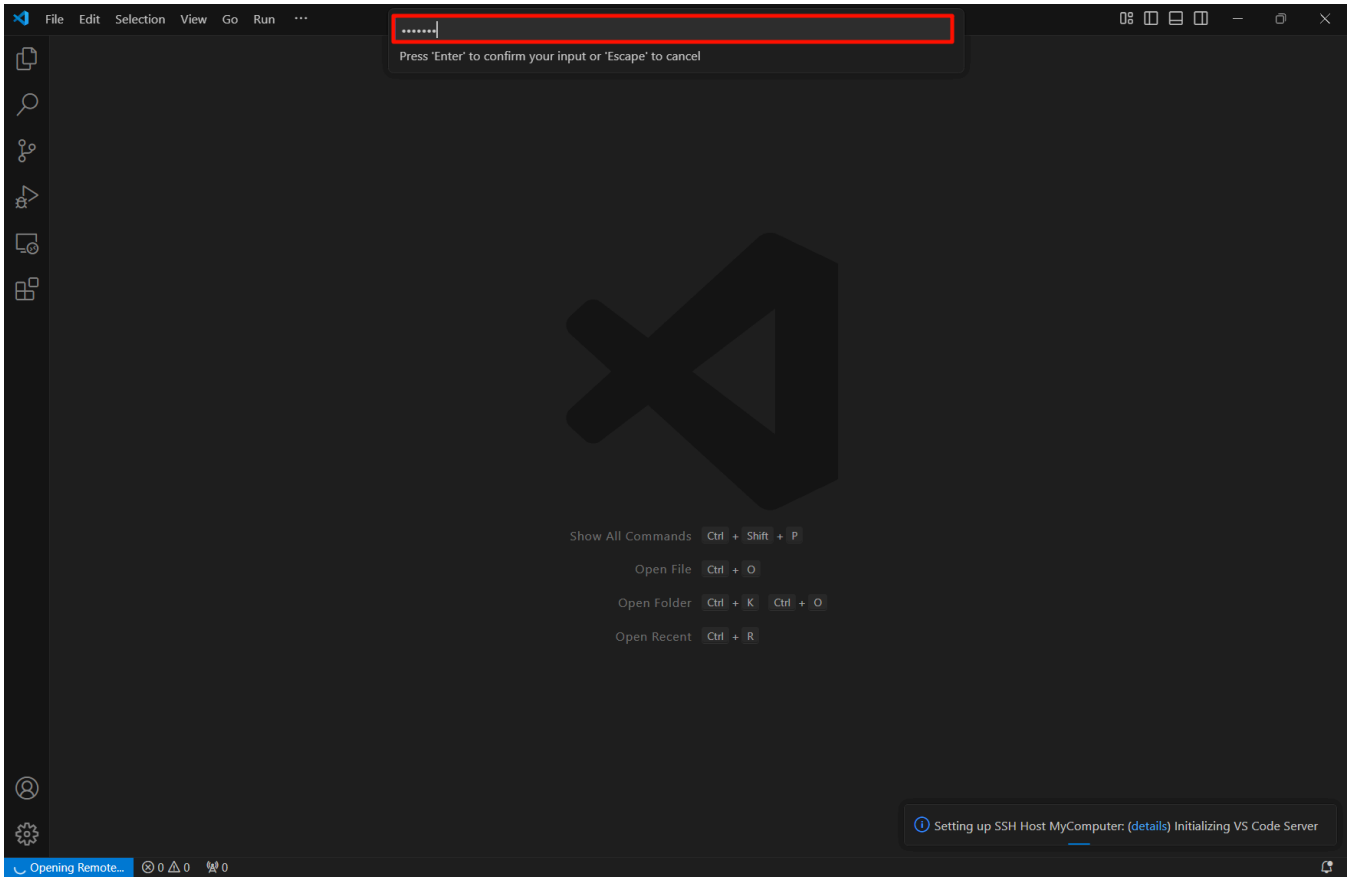

Select the platform of the remote device: fill it in according to the actual platform

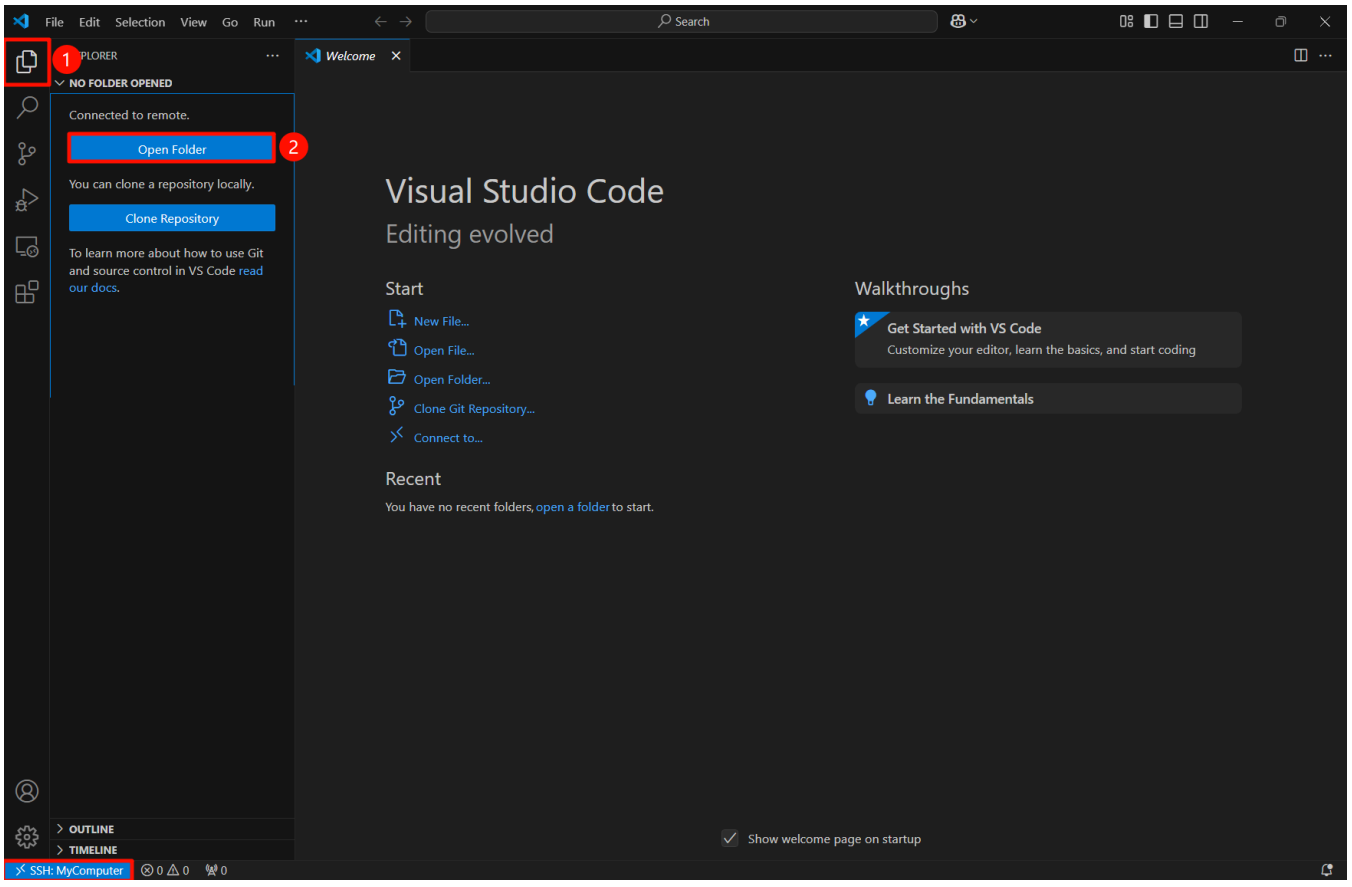

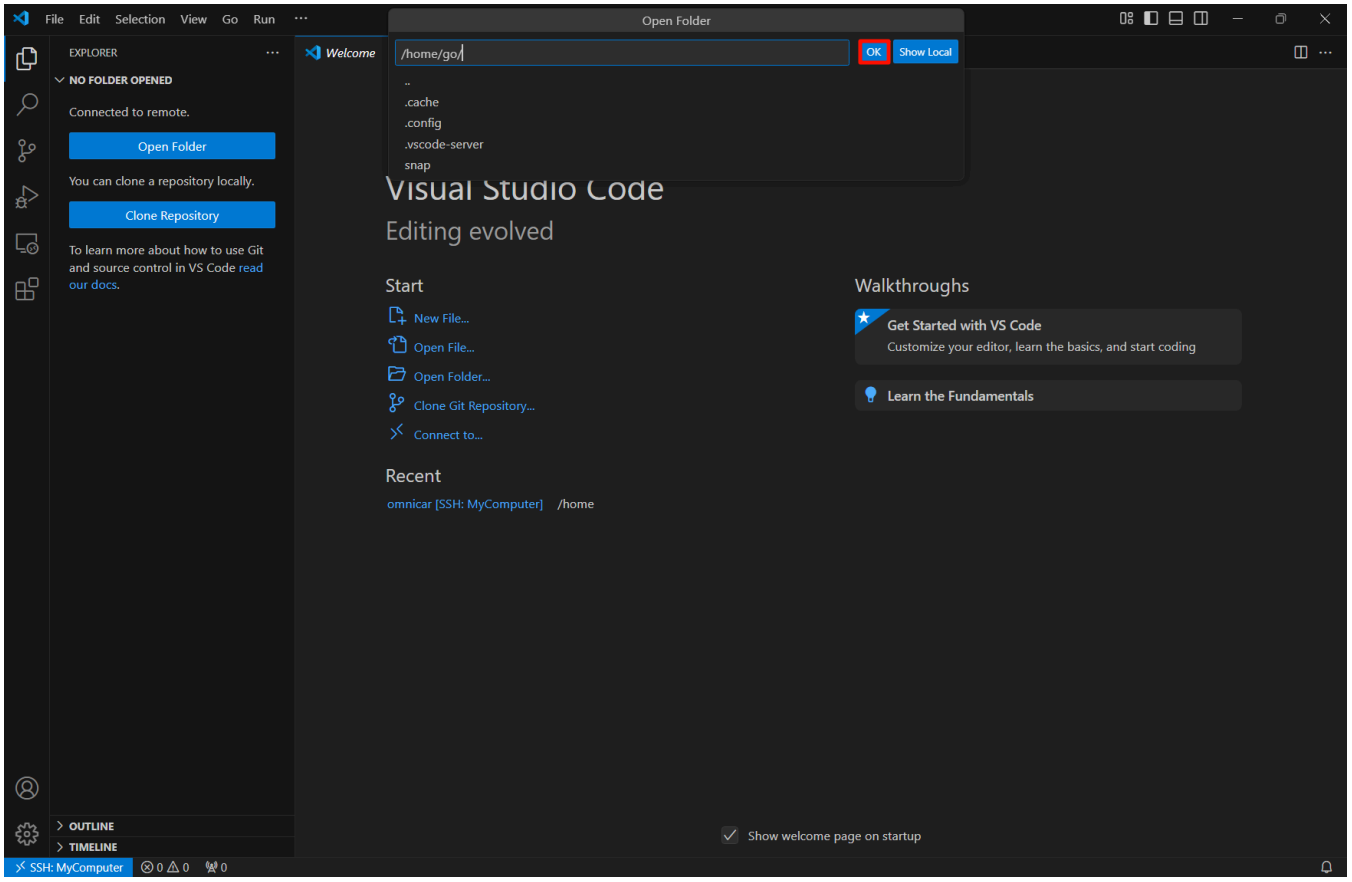

Enter the password: press Enter to confirm after typing the password

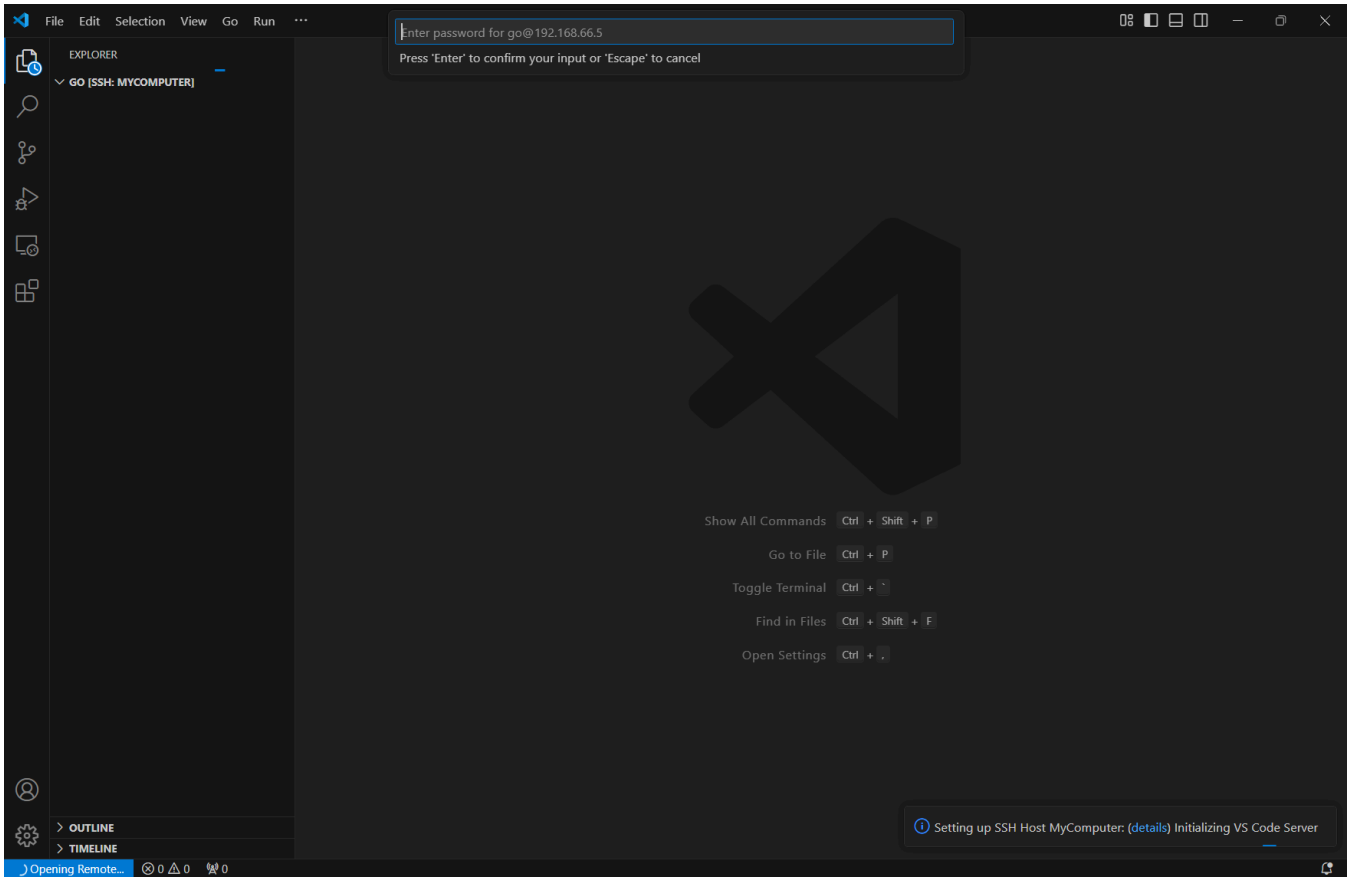

## Remote use

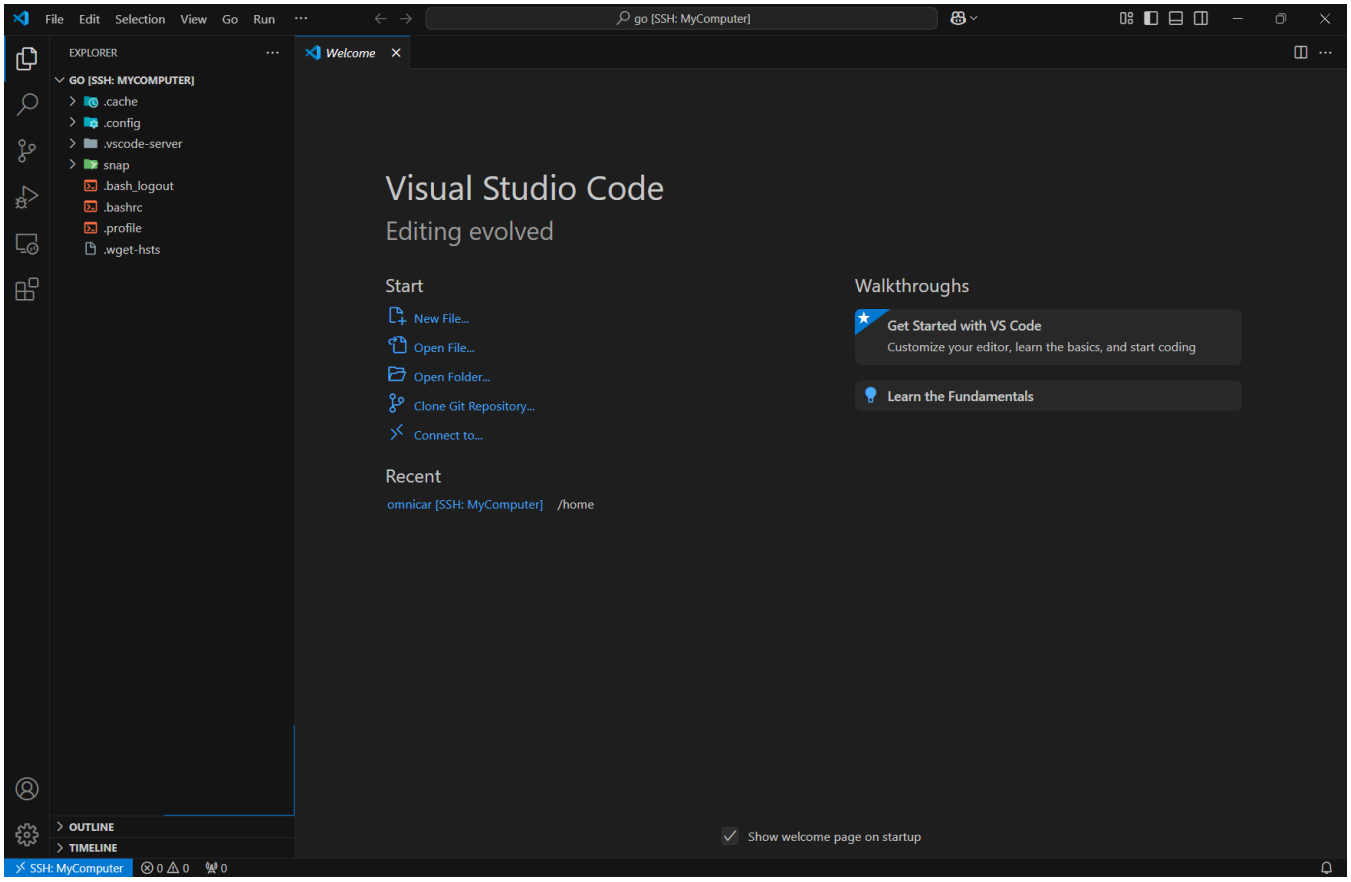

After the remote connection succeeds, a prompt appears in the lower left corner; you can open the folders of the remote device through VSCode

Enter the password again:

File Edit Selection View Go Run
go [SSH: MyComputer]
EXPLORER
GO [SSH: MYCOMPUTER]
.cache
.config
.vscode-server
snap
.bash_logout
.bashrc
.profile
.wget-hsts
