Modify the ORIN display resolution

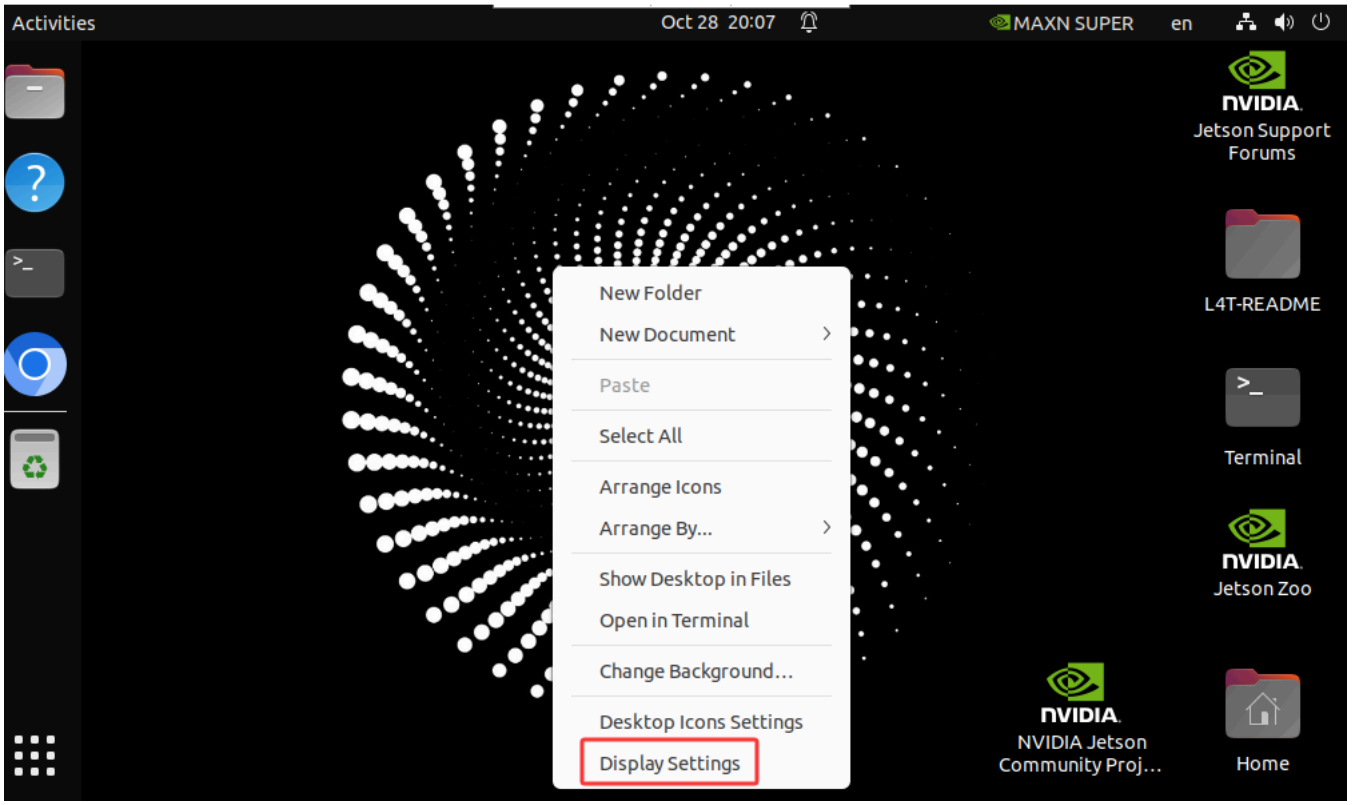

Modify the ORIN display resolution

1. Directly operating with a mouse
2. Modifying it through a VNC remote login

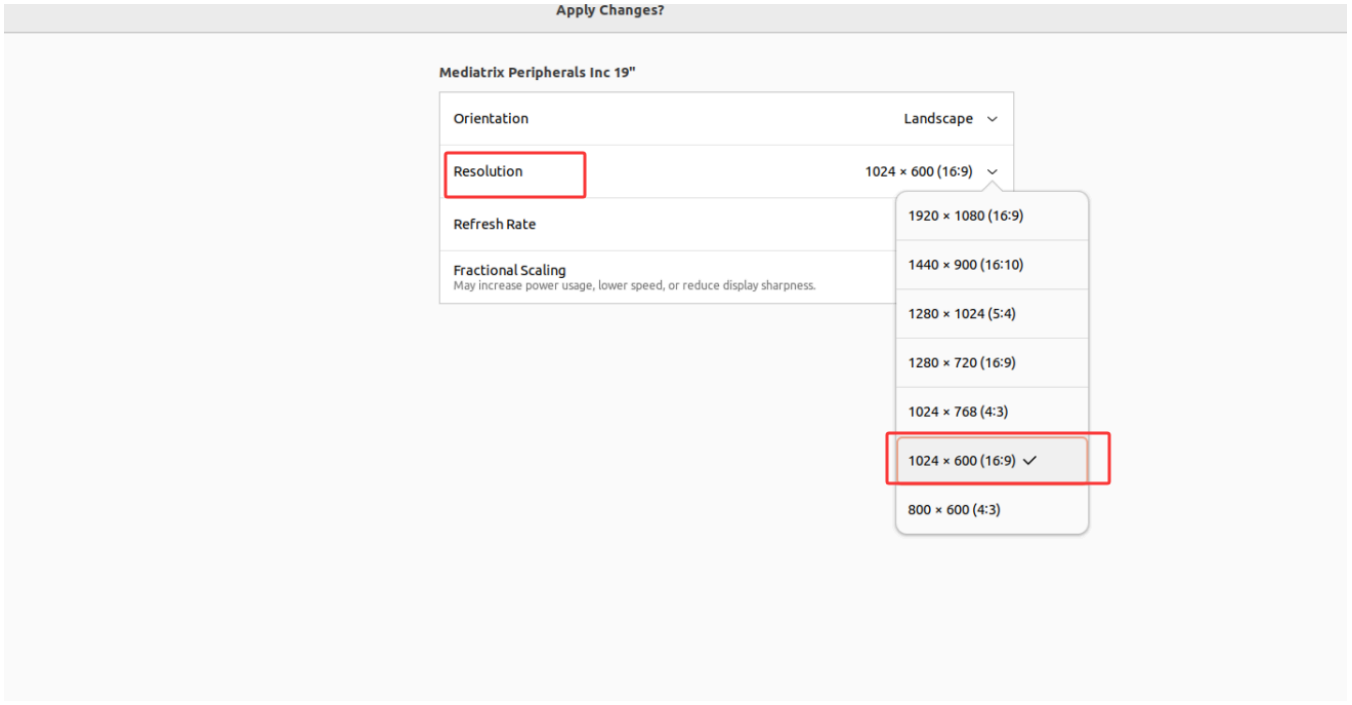

This tutorial uses a 7-inch screen as an example

1. Directly operating with a mouse

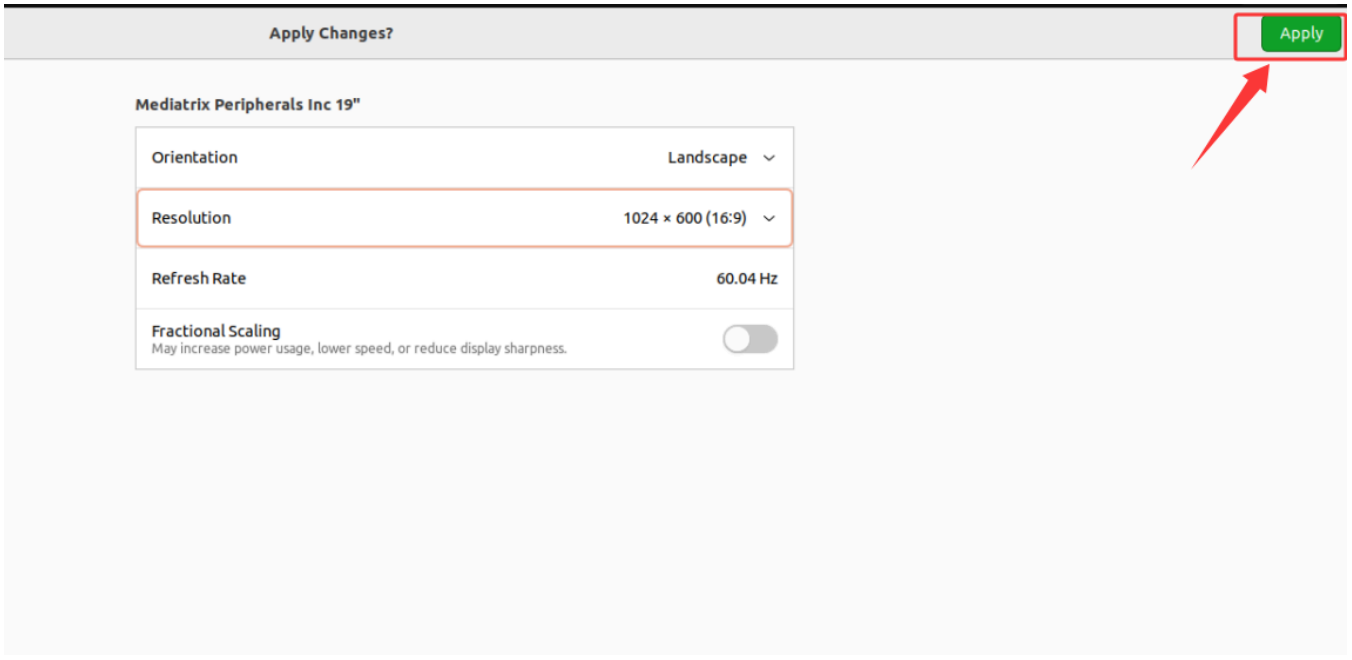

Plug the mouse into the USB port of the orin, right-click on the desktop and choose Display Setting

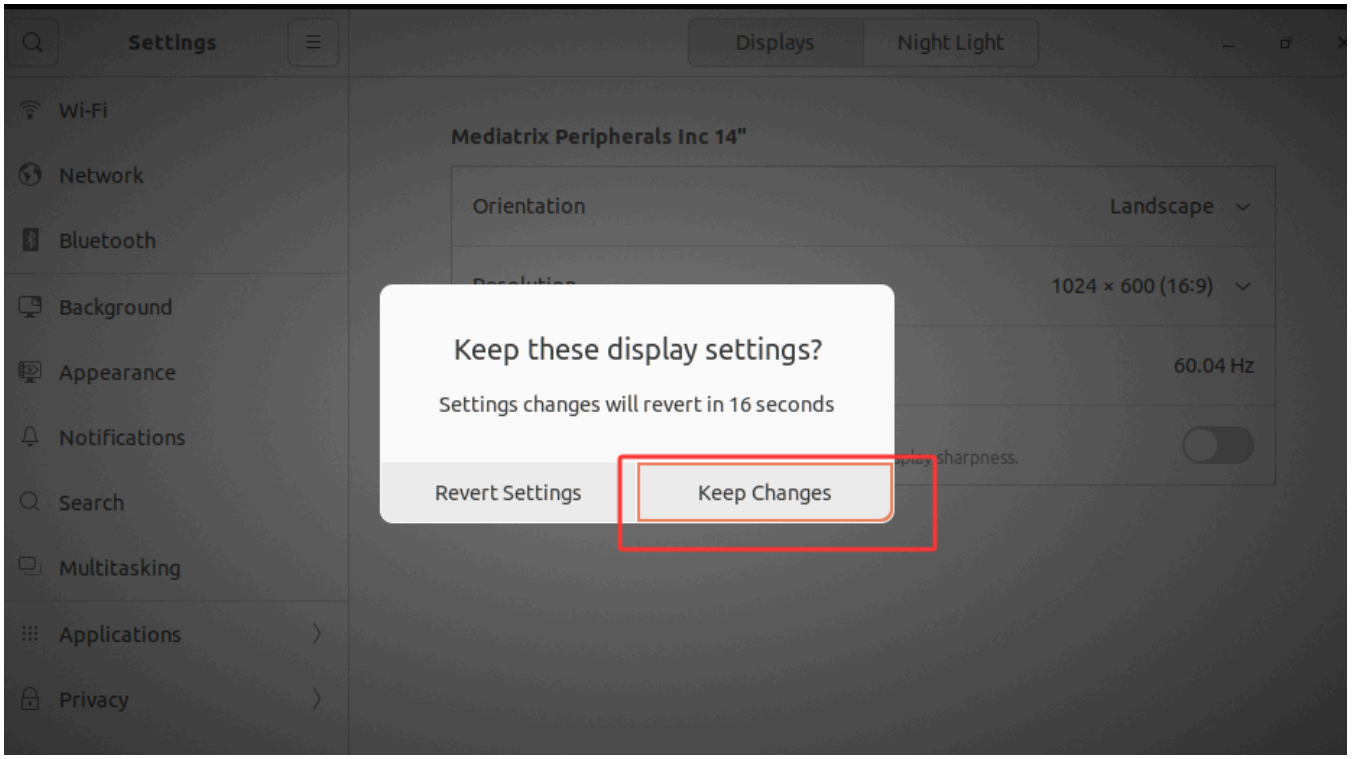

Click Resolution; since the resolution of the 7-inch screen is 1024x600, select 1024x600 here

After selecting it, click Apply in the top right corner

After clicking Apply, the prompt shown below appears; click Keep Changes.

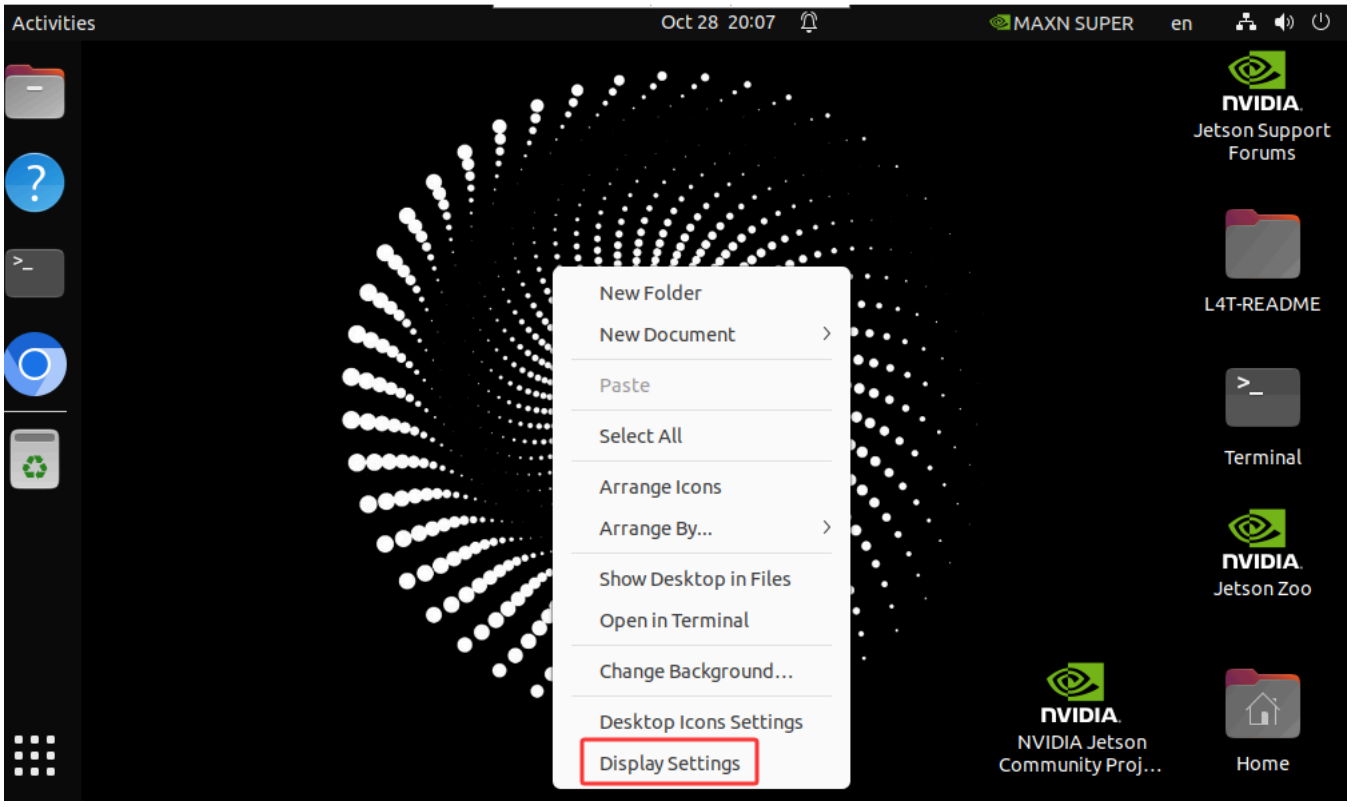

The modification is complete after the steps above.

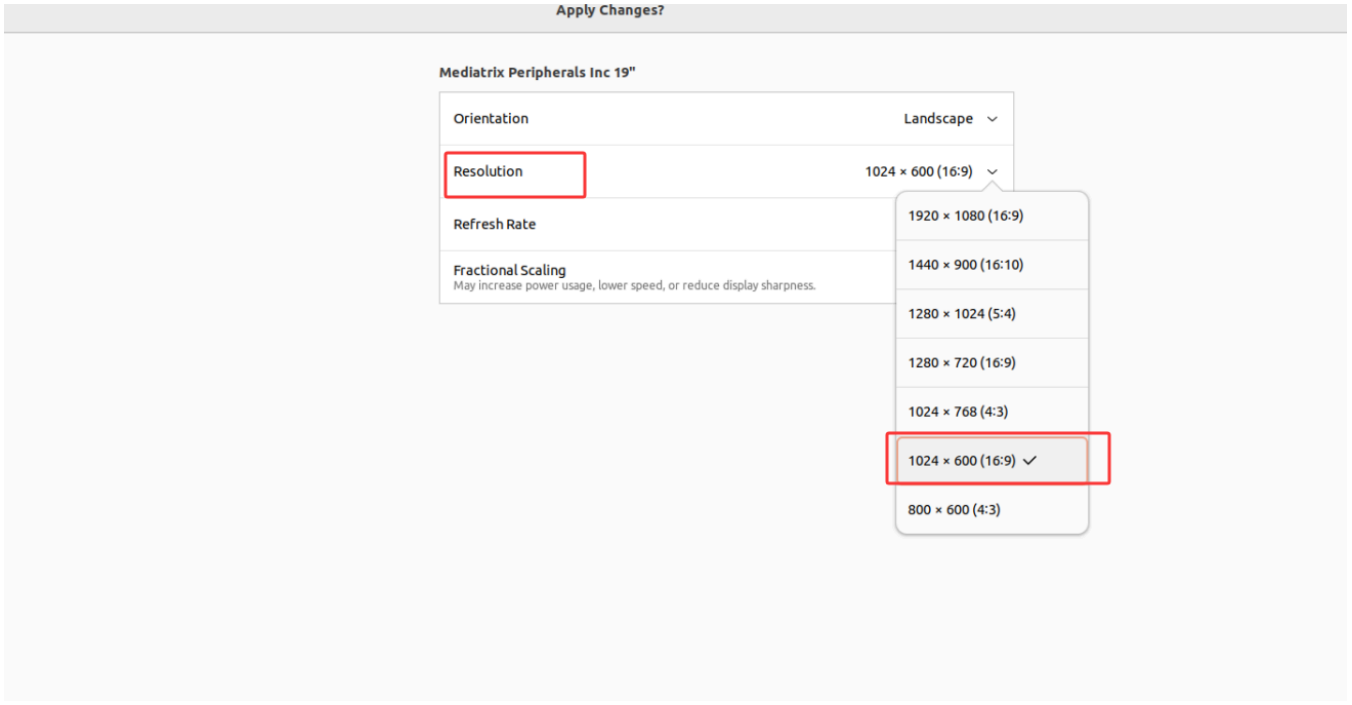

2. Modifying it through a VNC remote login

Refer to the **04.VNC remote control** chapter and log in to the ORIN mainboard remotely through VNC

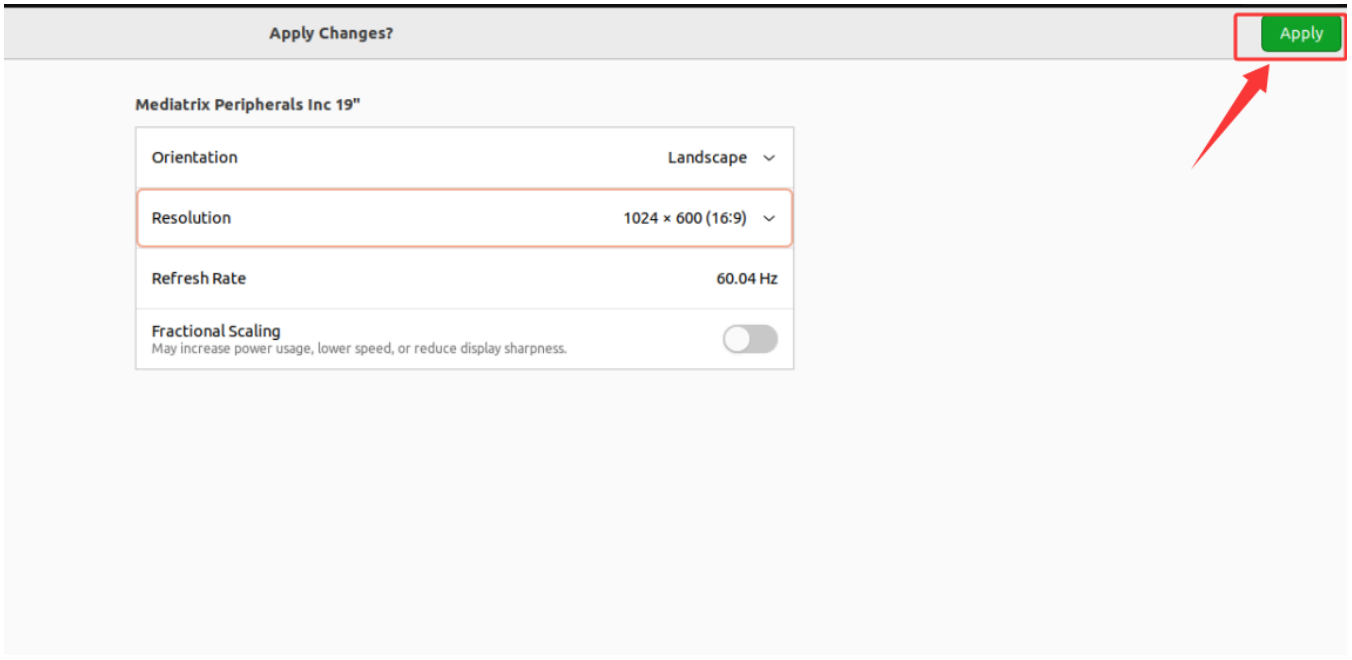

After logging in, right-click on the desktop and choose Display Setting

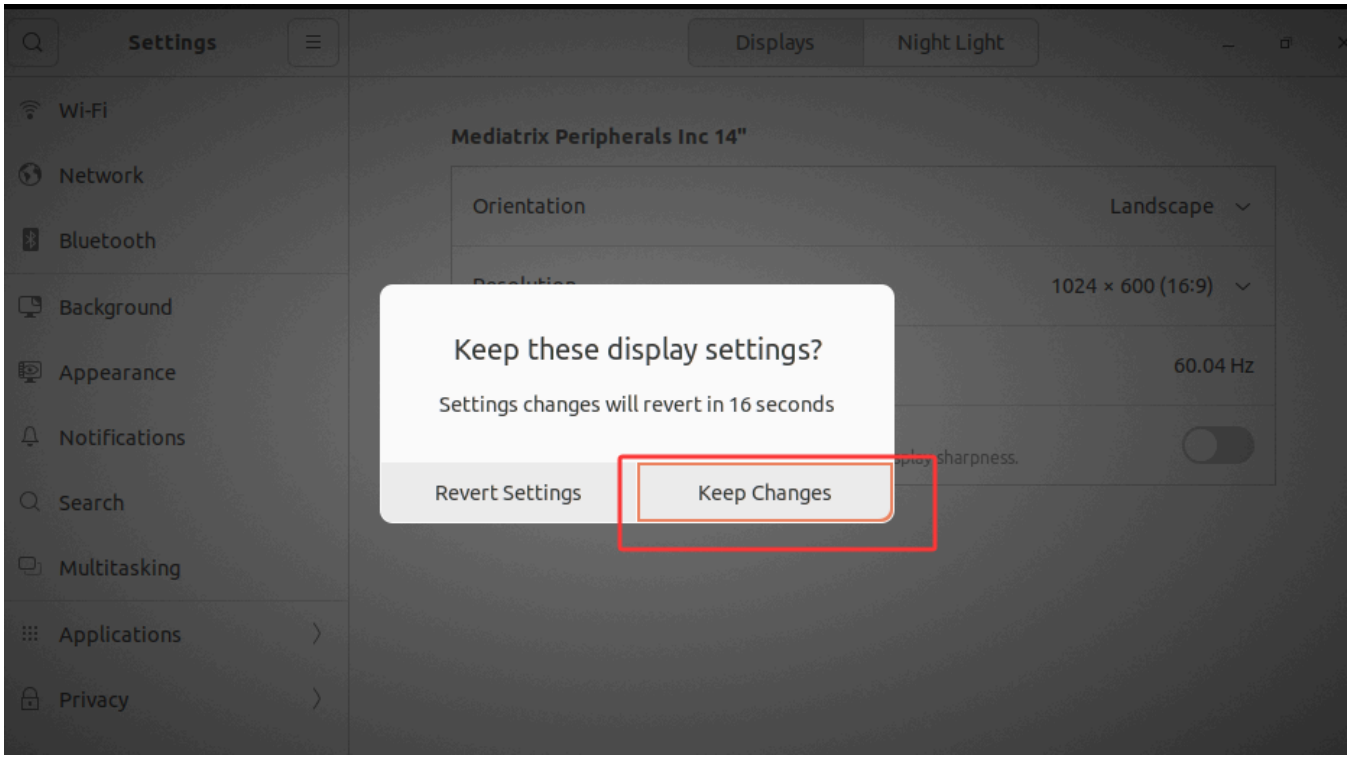

Click Resolution; since the resolution of the 7-inch screen is 1024x600, select 1024x600 here

After selecting it, click Apply in the top right corner

After clicking Apply, the VNC connection is dropped immediately, so you need to log in to VNC again. After logging in, the prompt shown below appears; click Keep Changes.

The modification is complete after the steps above.
