GPIO description

GPIO description
1. GPIO numbering
2. GPIO pins
    2.1. GPIO.BOARD mode
    2.2. GPIO.BCM mode
3. Other pins

The Jetson.GPIO library of the Jetson series mainboards allows developers to interact with external hardware devices through the 40Pin GPIO pins.

1. GPIO numbering

The Jetson.GPIO library supports two common numbering modes: BOARD and BCM mode

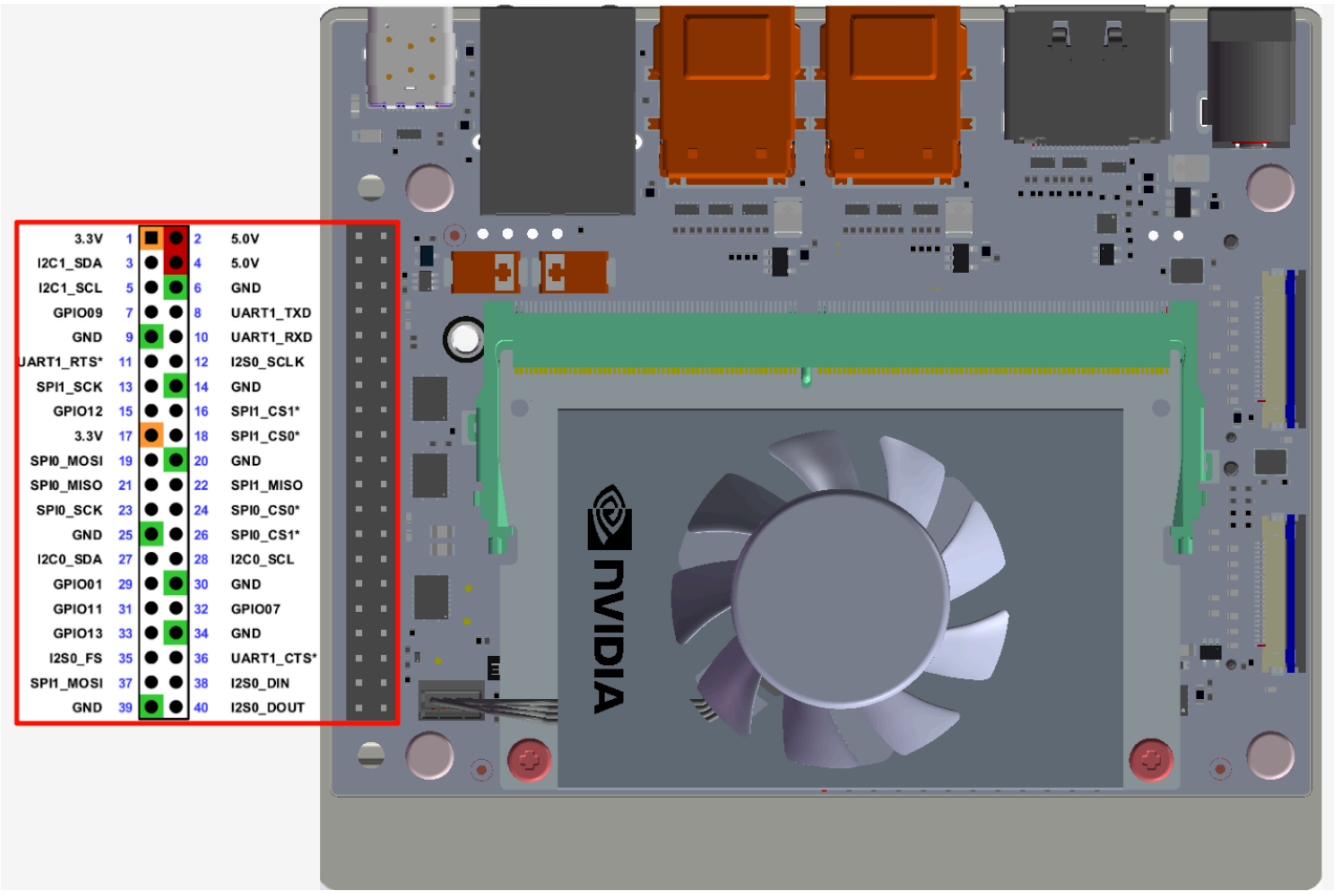

Note: The tutorial only demonstrates the GPIO.BOARD mode

Mode	Numbering method
GPIO.BOARD	Based on the physical pin numbering (1-40)
GPIO.BCM	Based on the GPIO logical numbering of the Broadcom chip (directly corresponding to the GPIO channels on the hardware chip)

2. GPIO pins

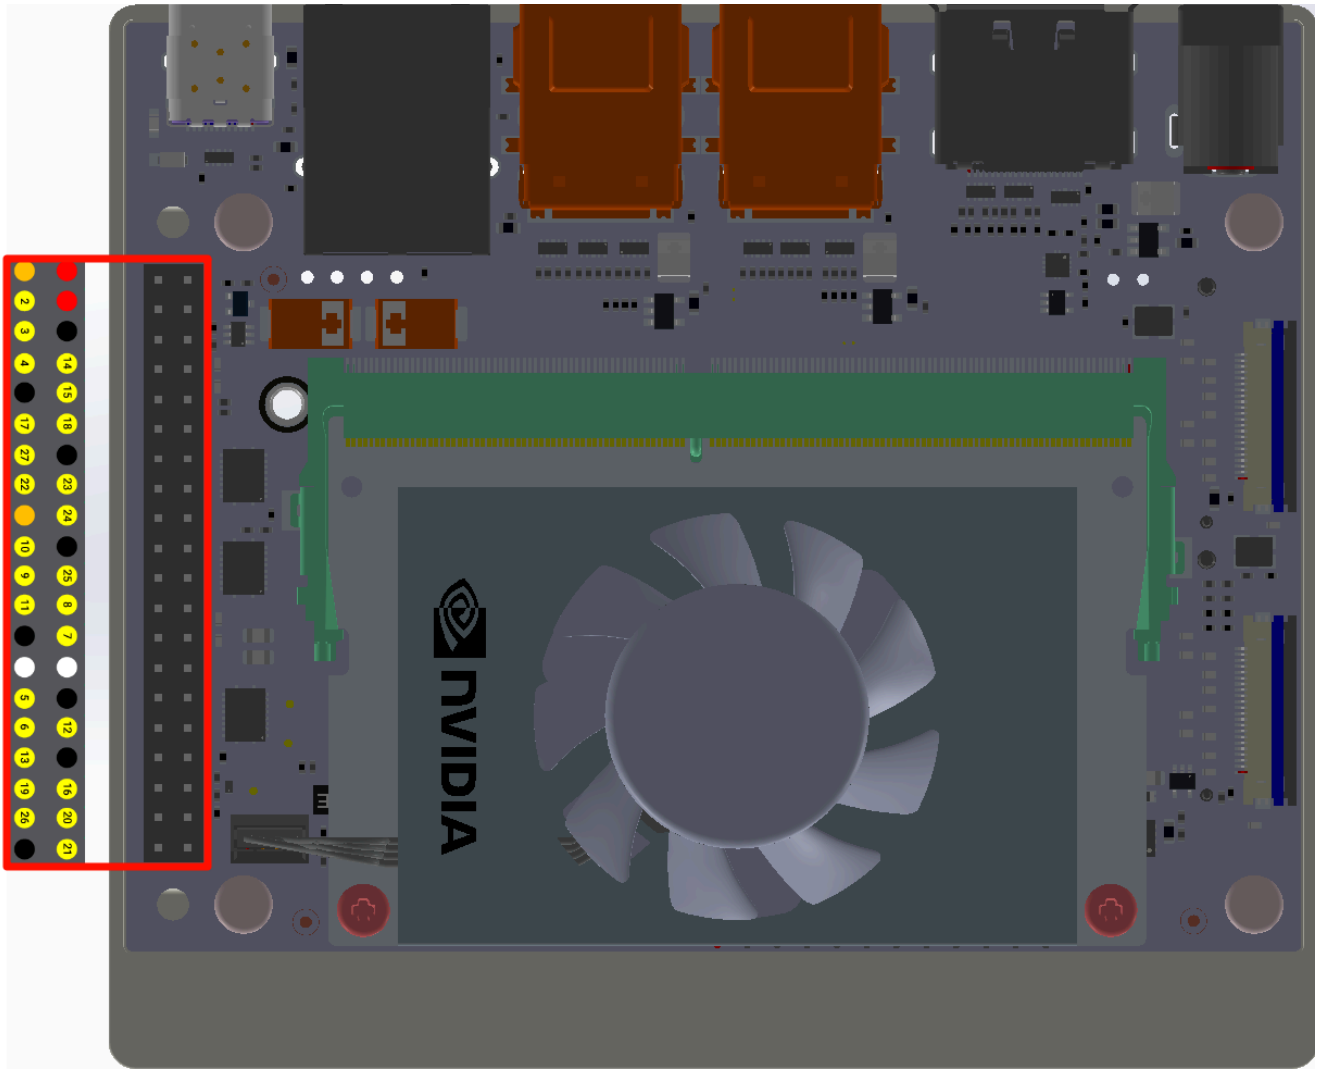

2.1. GPIO.BOARD mode

The one-to-one correspondence between the BOARD mode pins and the 40Pin pins on the mainboard:

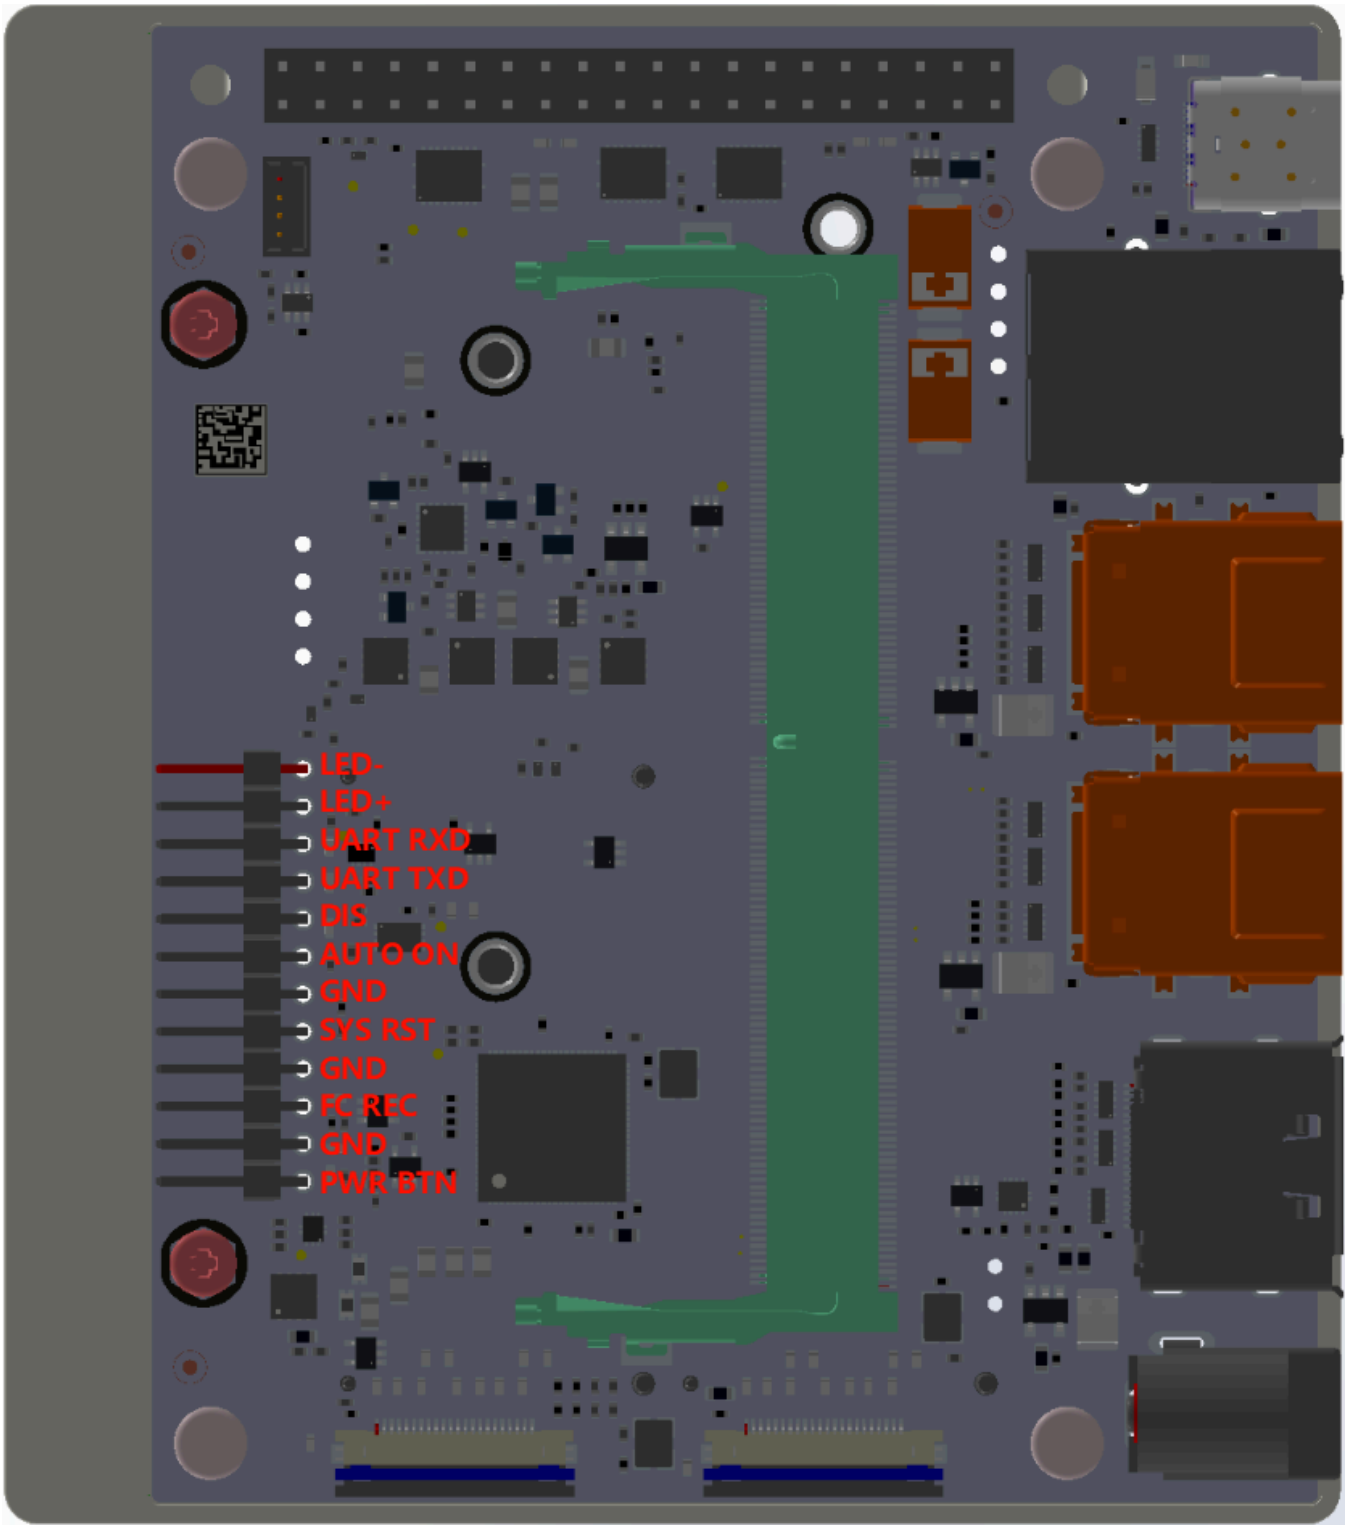

2.2. GPIO.BCM mode

The one-to-one correspondence between the BCM mode pins and the 40Pin pins on the mainboard:

3. Other pins

Description of the 12Pin header below the Jetson core board:

LED-
LED+
UART RXD
UART TXD
DIS
AUTO ON
GND
SYS RST
GND
FC REC
GND
